Marine Resource Plan for Hernando County

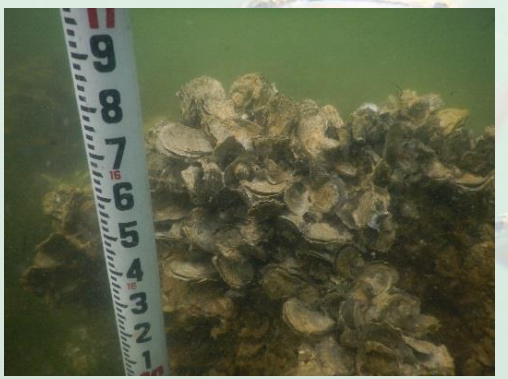
Keith Kolasa

Marine Resource Program

1. **Marine Resource Strategic Plan**
   - **Science based project planning**
   - **Identifies data gaps and monitoring needs**
   - **Promotes research partnerships**
   - **Identifies resource protection strategies**

2. **Coastal Habitat Enhancement**
   - **Oyster Reefs**
   - **Living Shorelines**
   - **Salt Marsh Nursery / Aquaculture Feasibility**

3. **Expand Offshore and Nearshore Artificial Reefs**



Marine Resource Program

4. Filing Data Gaps / Research Needs

Mapping and Characterization

- **Hard bottom / Seagrass**
- **Oyster habitat**

Community Structure

- **Sea turtle population assessments**
- **Benthic flora and fauna surveys**
- **Fisheries populations**
- **Coral abundance and distribution**

Monitoring / Research

- **Coral health monitoring**
- **Water quality**
- **Seagrass health**
- **Economic benefit studies**

Marine Resource Program

5. **Enhancing Recreation and Gulf Access**
   - **Boat ramps, parking, and amenities**
   - **Channel maintenance**
   - **Kayak / Paddling trails**

6. **Education / Promoting Awareness**
   - **Coastal and marine ecology**
   - **Economic value of our marine resource**
   - **Scallop harvest**
   - **Resource regulations**
   - **Red tide**

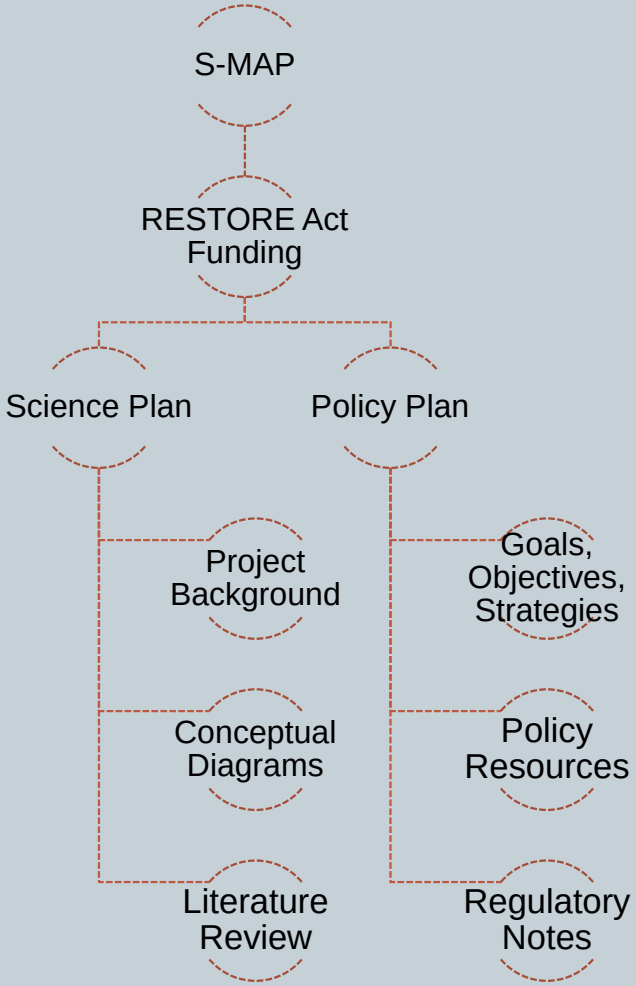
Identified Goals

- Goal 1: Shoreline stabilization
- Goal 2: Oyster reefs
- Goal 3: Artificial reefs
- Goal 4: Recreational and commercial fisheries
- Goal 5: Vessel navigation and gulf access
- Goal 6: Hard bottom habitat and seagrass

Organization and Legal Framework

- The policy plan will be framed similar to that of a comprehensive plan including:
  - Goals
  - Objectives
  - Strategies
    - *Regulatory notes*
    - *Sources of funding (RESTORE Act, ect.)*
- The science plan will be incorporated as an appendix to the policy plan and will be designed to provide scientific framework for proposed projects, including:
  - Review of relevant literature
  - Identification of available data
  - Identification of data gaps
  - Proposed future research
  - Conceptual diagram - Research objectives/actions

Framework



S-MAP
RESTORE Act Funding
Science Plan
Policy Plan
Project Background
Conceptual Diagrams
Literature Review
Goals, Objectives, Strategies
Policy Resources
Regulatory Notes

Goal 1: Shoreline Stabilization

- **To ensure that all estuarine shoreline interfaces in Hernando County contribute to the health and resiliency of the County's coastal and estuarine ecosystems**

Photo credit: reefball.org

Linda Pedersen Park – Marsh Grass Planting, Hernando County

Goal 1: Shoreline Stabilization Objectives

- **Goal: To ensure that all estuarine shoreline interfaces in Hernando County contribute to the health and resiliency of the County's coastal and estuarine ecosystems**
  - Objective 1.1: Promote the use of "living shorelines" as the preferred method of shoreline stabilization
  - Objective 1.2: Promote the use of "oyster gardens" by waterfront homeowners who have suitable habitats and available waterfront infrastructure
  - Objective 1.3 : Explore the potential for "living seawalls" to serve as a method for enhancing the ability of existing hardened shorelines to provide ecological benefits and to promote coastal resiliency.
  - Objective 1.4: Develop incentives to encourage riparian landowners to install living shorelines, oyster gardens, living seawalls and other shoreline-friendly techniques
  - Objective 1.5 : Promote community involvement and K-12 education related to shoreline management

Goal 1: Shoreline Stabilization Policy Plan

- **Goal: To ensure that all estuarine shoreline interfaces in Hernando County contribute to the health and resiliency of the County's coastal and estuarine ecosystems**
  - Objective 1.1 : Promote the use of "living shorelines" as the preferred method of shoreline stabilization
    - Stategy 1.1.1 : Inventory the linear extent of all private residential and commercial shoreline parcels and publicly owned shoreline parcels to identify those parcels that can take full advantage of regulatory streamlining for Living Shorelines
    - Strategy 1.1.2: Based on the inventory in Policy 1 above, identify those parcels whose biophysical characteristics that make them suitable for living shorelines
    - Strategy 1.1.3: For those parcels that exhibit features suitable for living shorelines develop an outreach/stakeholder engagement program and permitting/regulatory strategy to maximize their use
    - Strategy 1.1.4: Develop a living shoreline monitoring program that tracks the success of living shorelines over time

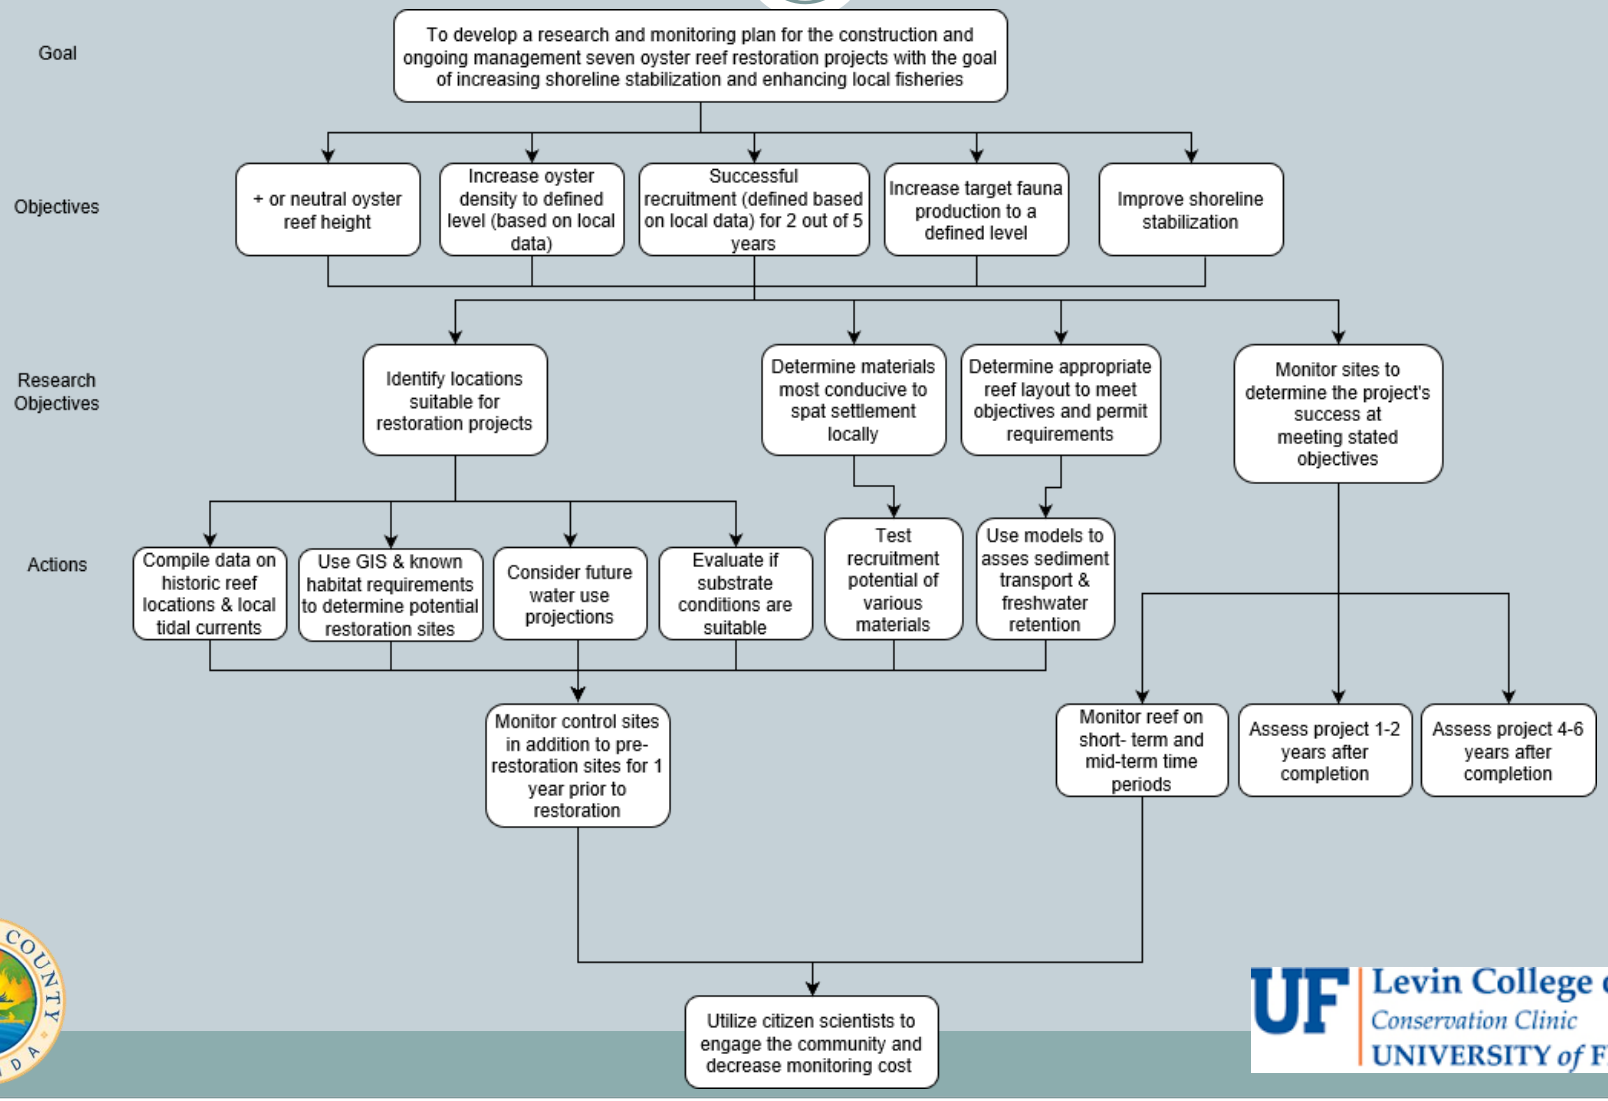
UNIVERSITY of FLORIDA

Goal 2: Oyster Reef Restoration

- **To establish/reestablish a robust system of oyster reefs that contributes to estuarine health and coastal resiliency**
  - **Suitable habitat inventory**
  - **Design and construct oyster reef**
  - **Monitor**

Oyster Reef Research Map

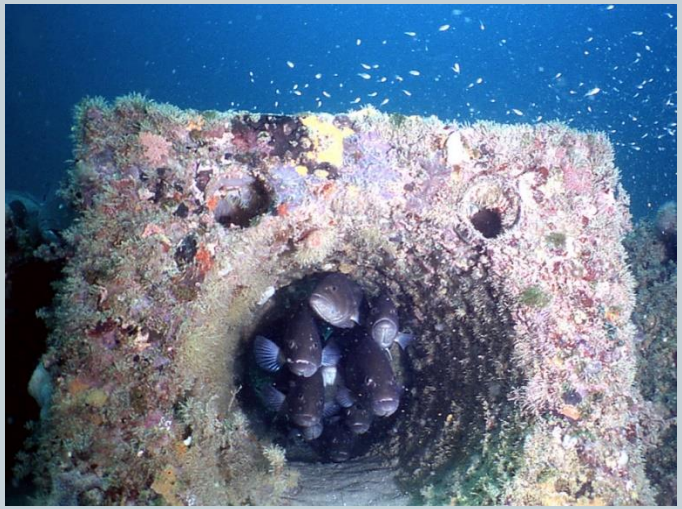


HERNANDO COUNTY FLORIDA

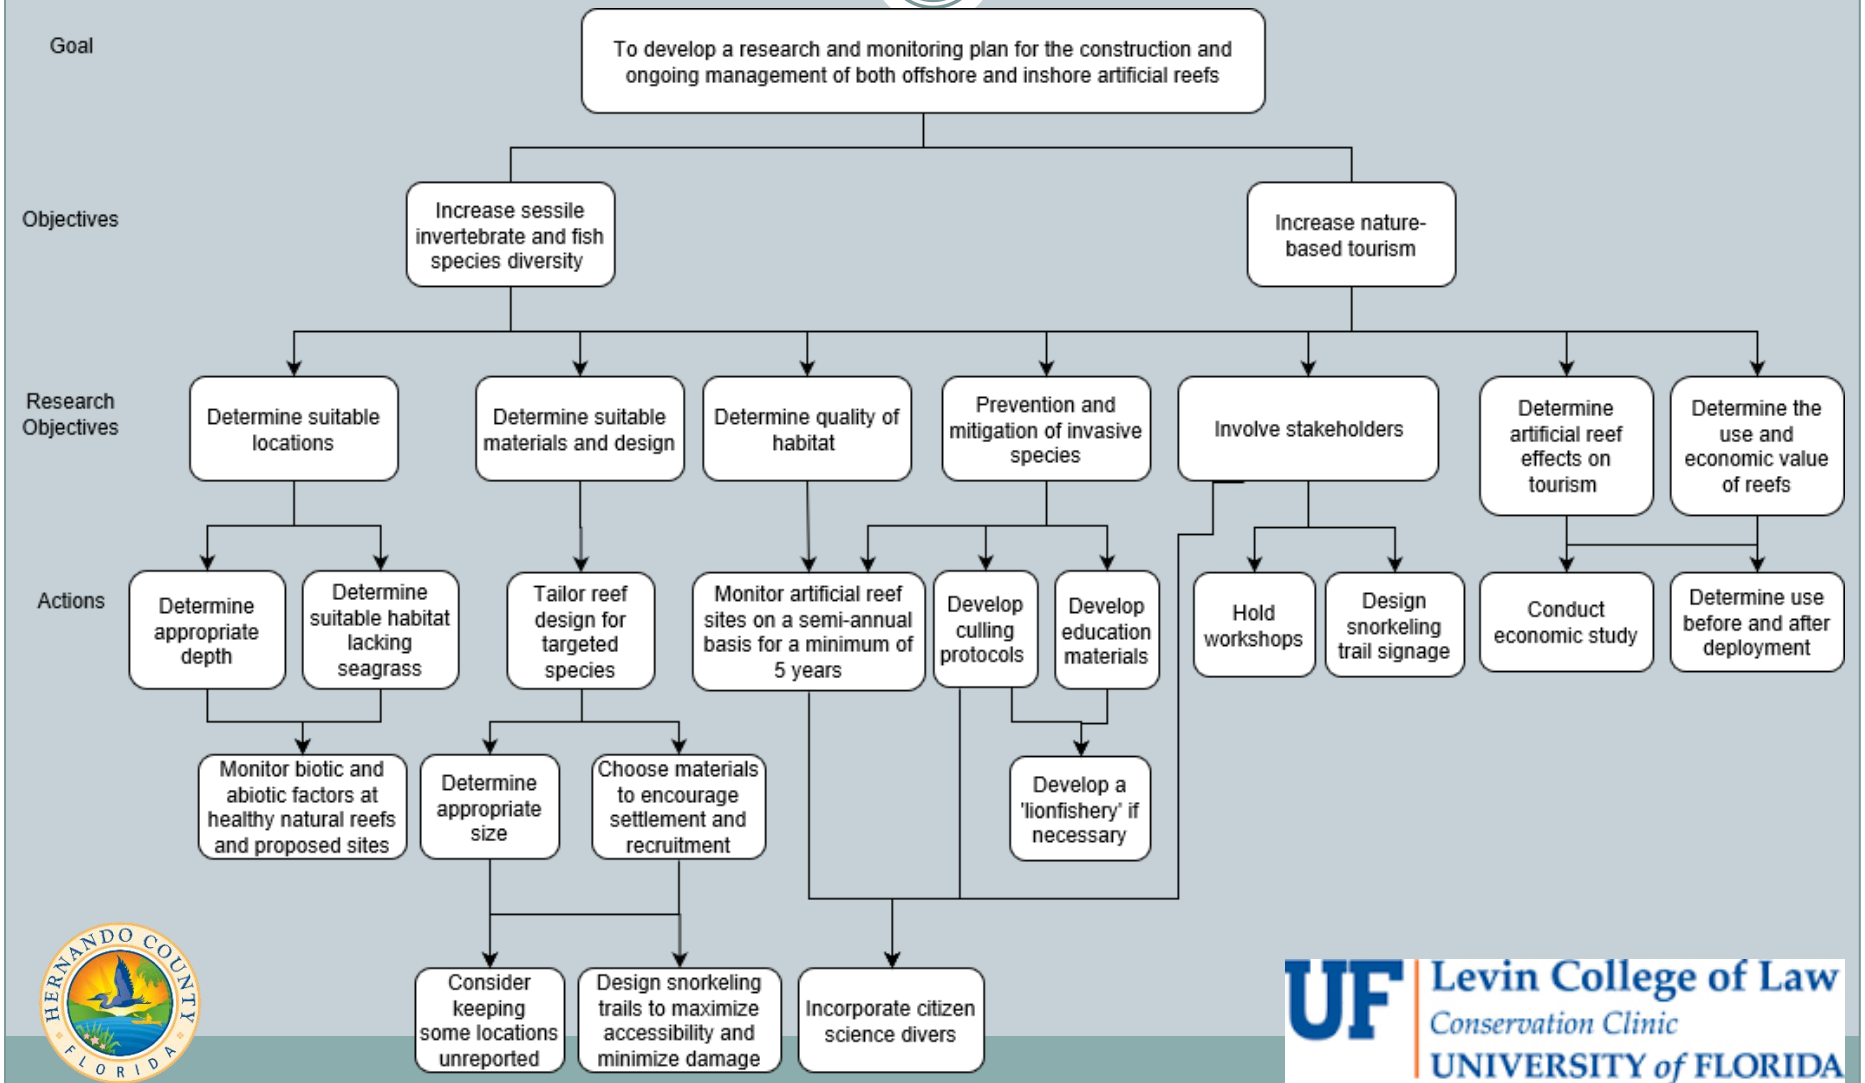
UF Levin College of Law Conservation Clinic UNIVERSITY of FLORIDA

Goal 3: Artificial Reefs

- **To enhance Hernando County's recreational fishery by maximizing available structure for recreationally important fish species at all life history stages through artificial reef deployment.**
  - Identify gaps in habitat structure
  - Snorkeling trails
  - Biological monitoring of fish and invertebrates



Artificial Reef Research Map

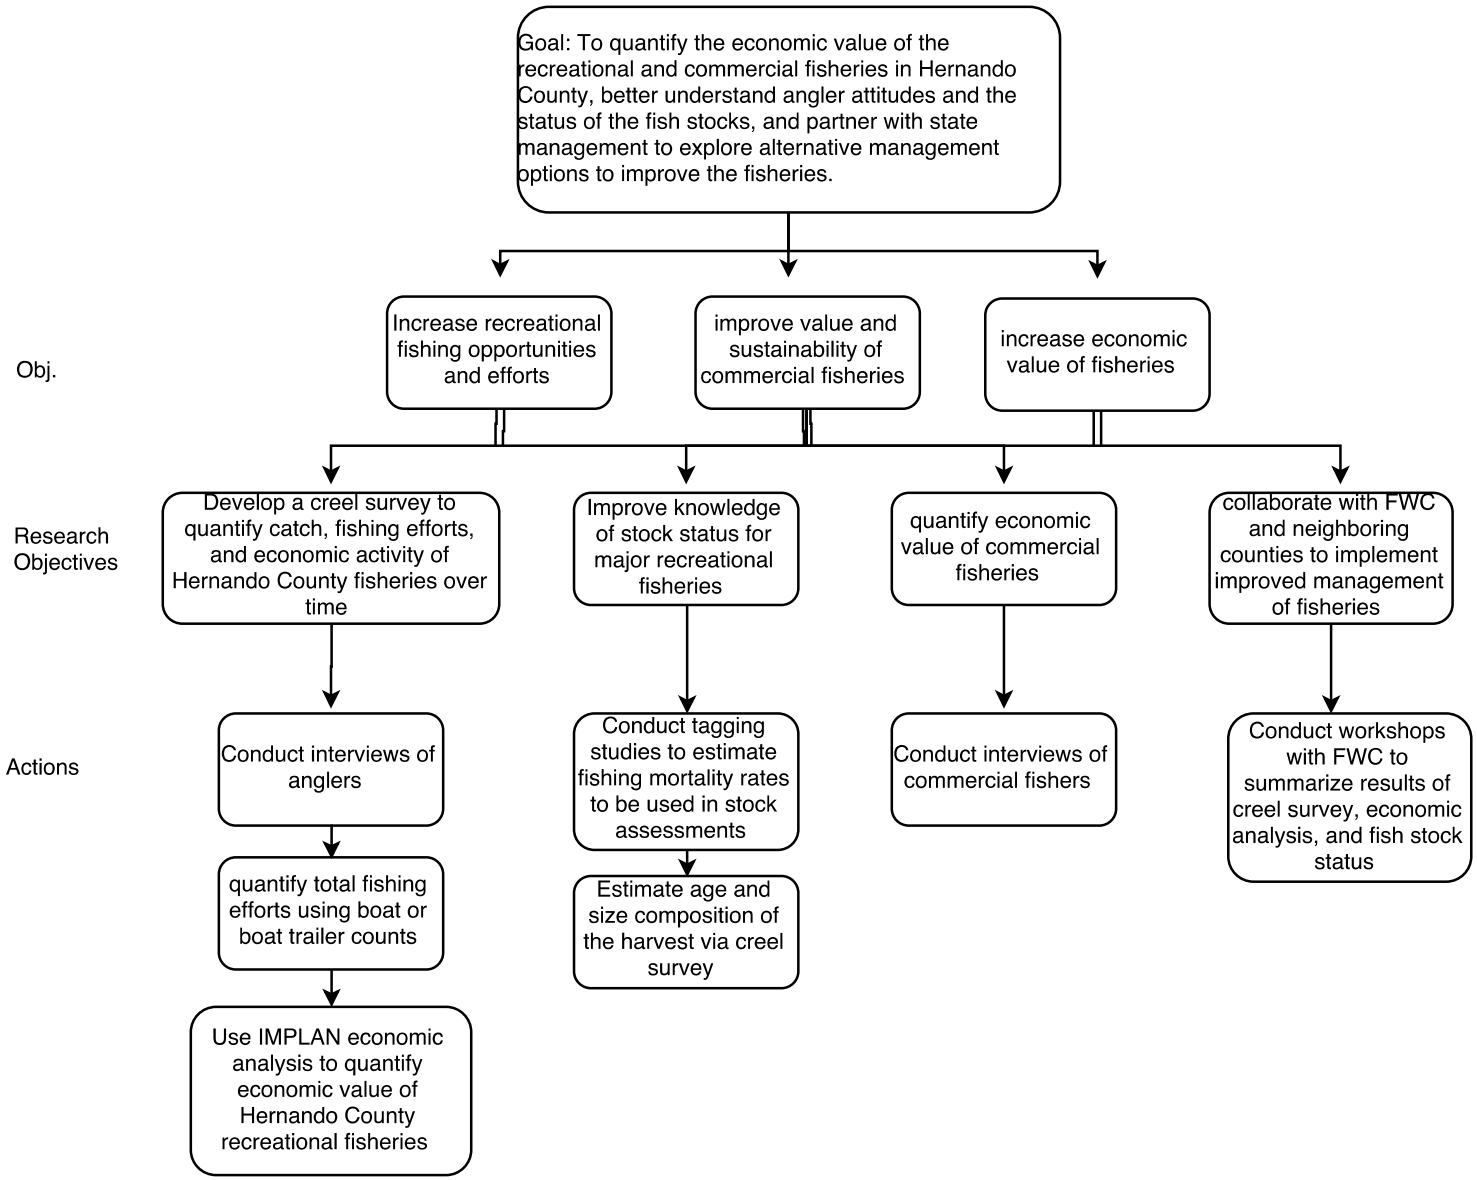


HERNANDO COUNTY FLORIDA

UF Levin College of Law Conservation Clinic UNIVERSITY of FLORIDA

Goal 4: Recreation and Commercial Fisheries

- **To maintain a robust and economically and ecologically sustainable commercial fishery**



HERNANDO COUNTY FLORIDA

UF Levin College of Law Conservation Clinic UNIVERSITY of FLORIDA

Goal 5: Vessel Navigation and Gulf Access

- **To maintain and improve vessel navigation in and through the waters of Hernando County, including the beneficial use of dredge spoil for restoration and enhancement.**
  - Channel and boat ramp improvements, parking, and amenities, improvements to coastal parks, Seagrass Signage

Photo Credit: IFAS Communications

Goal 6: Hard Bottom Habitat and Seagrass

- **To ensure the ecological integrity of Hernando County's unique assemblage of hard bottom habitats and interspersed sea grass beds.**
  - Hard bottom community characterization
  - Assess coral abundance and distribution
  - Complete sea turtle population assessment

Goal
To monitor and protect the health of Hernando County's hardbottom and seagrass habitats as well as organisms reliant upon them
Objectives
·Increase public awareness regarding the negative impacts of seagrass scarring and improper anchoring
·Restore propeller scarring at identified sites within Hernando County to a defined level
·Estimate the abundance and composition of coral, sponge, and sessile invertebrate species present
Research Objectives
Determine the amount of seagrass and hardbottom habitat and restore damaged areas
Increase public awareness regarding negative impacts of seagrass scarring & improper anchoring practices
Assess coral and sessile invertebrate abundance and composition
Study the composition, distribution, and ecology of sea turtle assemblages
Increase public awareness regarding sea turtle interactions
Actions
Determine the location of hardbottom habitat
Identify and map seagrass propeller scars
Conduct a survey to determine baseline awareness of prop scarring & proper anchoring practices
Place non-regulatory signage at boat ramps and in areas with heavy propeller scarring
Monitor sleeping areas (at hardbottom outcroppings)
Collaborate with researchers established in the region to develop indepth, long term studies
Place moorings on sites with high usage
Restore seagrass propeller scars
Work with UF and Florida Sea Grant to engage with boaters on seagrass propeller scars and best boating practices
Conduct a marine bioblitz
Quantify boater behavior and asses responses to improvements
Use ARMS units to assess reef cryptofauna abundance and composition
Conduct studies to determine coral and sponge composition, abundance, health
Place non-regulatory signage throughout the county's coastal boat ramps and fishing piers
Organize community marine debris cleanup events
Conduct workshops and trainings with public regarding sea turtle interactions, identifications, and recues

Hernando County First in Florida to Bring

ENTIRE COASTAL ZONE

into Comprehensive Plan

By Dorothy Zimmerman

With technical support from Florida Sea Grant, Hernando County has become Florida's first county to add a long-term management strategy for its entire marine and coastal zone to the county's comprehensive plan.

"To my knowledge this is the most comprehensive and explicit treatment of marine resources in a local government comprehensive plan in Florida," said Tom Ankersen, Florida Sea Grant's legal specialist who led the initiative.

Typically in Florida, a county's comprehensive plan provides long-range guidance on dry land or shoreline issues to keep growth and development in balance among competing interests, Ankersen said. Management of marine submerged lands has not been factored into the planning equation.

Hernando County – Proposed Project Budgets – RESTORE Funds (Pot 3)

Project	Total Cost	Pot 3 Request	Other Potential Funding Sources
Marine and Coastal Habitat Enhancement	**$3.1 M**	**$3.1 M**	*FIO – Centers of Excellence *NFWF *NRDA FDEP Coastal Initiative SWFWMD
Waterway/Gulf Access	**$4.56 M**	**$4.56 M**	FDEP Trail Grants Florida Boating Improvement
Water Quality	**$5.0 M**	**$5.0 M**	FDEP, SWFWMD

*FIO – Florida Institute of Oceanography
*NFWF – National Fish and Wildlife Foundation
*NRDA – Natural Resource Damage Assessment

Hernando County - Pot 3 Project Budgets

Project	Cost
Artificial Reef Program	$ 2,350,000
Oyster Reefs and Living Shorelines	$ 750,000
Boat Ramp and Coastal Park Amenities	$ 1,165,000
Channel Improvements - Hernando Beach, Pine Island, Weeki Wachee Canals	$ 3,135,000
Paddling Trails	$ 260,000
Water Quality – Calienta Street	$ 2,400,000
Septic to Sewer	$ 2,600,000
TOTAL	$12,660,000

Project Budget Summary

Project	Cost
Artificial Reef Program	$ **2,350,000**
Feasibility, Design, Permitting	$ 200,000
Baseline Data	$ 450,000
Deployments	$ 1,350,000
Success Monitoring	$ 350,000
Oyster Reefs and Living Shorelines	**$ 750,000**
Feasibility, Design, Permitting	$ 150,000
Deployments	$ 440,000
Success Monitoring	$ 160,000
TOTAL	**$ 3,100,000**
