The Southwest Florida Water Management District (District) does not discriminate upon the basis of any individual's disability status. This non-discriminatory policy involves every aspect of the District’s functions, including one’s access to, participation, employment, or treatment in its programs or activities. Anyone requiring accommodation as provided for in the American with Disabilities Act should contact (352) 796-7211 or 1-800-423-1476, extension 4215; TDD ONLY 1-800-231-6103; FAX (352) 754-6749.

On the Cover: Aerial photograph of the Homosassa Main Springs pool and upper portion of the Homosassa River in 2001 (Southwest Florida Water Management District files).
List of Appendices

Appendix I – Summary information for percentage of flow reductions associated with 15 percent decreases in predicted relative abundances of plankton and nekton in the Homosassa and/or Halls River for the benchmark periods of 2007 and October 18, 1995 through May 13, 2009.

Appendix J – Modeled isohaline river kilometer location percentiles for the Homosassa River as determined for the benchmark period of 2007 using the Homosassa River hydrodynamic model described in Chapter 2 of this report.
Appendix K – Modeled isohaline river kilometer location percentiles for the Homosassa River as determined for the benchmark period of 2007 based on regression models 1 and 2 described in Chapter 2 of this report.

Appendix L – Modeled isohaline river kilometer location percentiles for the Homosassa River as determined for the benchmark period from October 18, 1995 through May 13, 2009 based on regression models 1 and 2 described in Chapter 2 of this report.

Appendix M – Modeled area, volume and shoreline length percentiles associated with specific isohalines in the Homosassa River as determined for 2007 using the Homosassa River hydrodynamic model described in Chapter 2 of this report.

Appendix N – Modeled area, volume and shoreline length percentiles associated with specific isohalines in the Homosassa River as determined for 2007 based on regression models 1 and 2 described in Chapter 2 of this report.

Appendix O – Modeled area, volume and shoreline length percentiles associated with specific isohalines in the Homosassa River as determined for the benchmark period from October 18, 1995 through May 13, 2009, based on regression models 1 and 2 described in Chapter 2 of this report.

Appendix Q – Excerpt from the July 27, 2010 Southwest Florida Water Management District Governing Board Meeting Agenda and Meeting Information document concerning draft report on proposed minimum flows for the Homosassa River system and submission of the report to the peer-review process.

Appendix R – Approved minutes for the July 27, 2010 Southwest Florida Water Management District Governing Board meeting. Minutes associated with the peer-review of proposed minimum flows for the Homosassa River system highlighted in yellow.

Appendix T – Excerpt from the November 16, 2010 Southwest Florida Water Management District Governing Board Meeting Agenda and Meeting Information document concerning peer-review of proposed minimum flows for the Homosassa River system.

Appendix U – Approved minutes for the November 16, 2010 Southwest Florida Water Management District Governing Board meeting, including minutes associated with the peer-review of proposed minimum flows for the Homosassa River system (highlighted in yellow).

Appendix V – District staff response (shown in red font or within comment balloons) to: Hackney, C.T., Peterson, M.S. and Motz, L.H. 2010. Scientific review of the recommended minimum flows for the

Appendix W – Correspondence and other relevant documents associated with stakeholder input and public outreach concerning development of proposed minimum flows for the Homosassa River system and the District’s Springs Coast Minimum Flows and Levels Public Workshop series.
