2006 Estimated Water Use in the Southwest Florida Water Management District

The Estimated Water Use Report is prepared by The Southwest Florida Water Management District,
Resource Projects Department
Conservation Projects Section
Mehrshad Nourani, Senior Water Conservation Analyst, MUP, GISP
Tammy Antoine, Staff Water Conservation Analyst

Publication Date: June 2008

The Southwest Florida Water Management District (District) does not discriminate upon the basis of any individual's disability status. This non-discrimination policy involves every aspect of the District's functions, including one's access to, participation, employment, or treatment in its programs or activities. Anyone requiring reasonable accommodation as provided for in the Americans With Disabilities Act should contact the Resource Conservation and Development Department, at 352-796-7211 or 1-800-423-1476 (Florida), extension 4285; TDD ONLY 1-800-231-6103 (Florida); FAX 352-754-6885/SUNCOM 663-6885.

Executive Summary

The Estimated Water Use report goal is to summarize and analyze freshwater use in the Southwest Florida Water Management District (District). The report is used as a data source for a variety of water supply planning and management purposes.

Freshwater use during calendar year 2006 is examined in this edition of the Estimated Water Use Report. In addition to reporting total water use, six specific water use categories are individually analyzed: Public Supply, Domestic Self-supply, Recreational/Aesthetic, Agricultural, Mining/Dewatering, and Industrial/Commercial.

The Public Supply category includes public water systems and privately held water utilities required by permit to report pumpage to the District. Water utilities that are too small to be required to report pumpage also are included. The Domestic Self-supply category assesses the estimated freshwater consumption from non-permitted individual wells.

Recreational/Aesthetic use includes water used for self-supplied large-scale landscapes, parks, and golf courses. The Agricultural use category provides estimated water use by crop type. Mining/Dewatering examines the self-supplied water use of mining operations, itemized by the type of material being extracted. The Industrial/Commercial category disaggregates water use data by industry type, including power generation for those businesses and institutions that are self-supplied.

The primary sources of data for this report are unpublished water use permit (WUP) records, especially pumpage records, which specific permittees are required to submit on a regular basis. Additional data sources include, but are not limited to, an annual survey of Public Supply permittees, population studies from the University of Florida's Bureau of Economic

and Business Research, and agricultural water use data.

In 2006, the population within the District was estimated to be 4.77 million people.

Estimated 1.37 billion gallons of freshwater was withdrawn each day within the District. Approximately, 78 percent of the withdrawals were supplied from ground water sources (Table B-1).

Total Public Supply Use = 686 mgd

In 2006, Public Supply water users, including Domestic Self-supply, constituted the largest single category, withdrawing an estimated 686 million gallons each day (mgd), or 50 percent of total freshwater withdrawal (ground and surface) within the District. Agricultural water users consumed 487 mgd or 36 percent (ground and surface, Table 9) of total withdrawal. Industrial/Commercial, Mining/Dewatering and Recreational/Aesthetic consumed 74 mgd, 41 mgd and 82 mgd respectively (Table 9).

At the county level, Polk and Hillsborough counties used 261 mgd and 238 mgd of total fresh water, respectively. With approximately 143 mgd of total use, Manatee County used 87 mgd to support Agriculture and 42 mgd for Public Supply.

In 2006, Hillsborough County maintained the largest total Public Supply water withdrawal of the sixteen counties. An average of 369 mgd was withdrawn each day in Hillsborough County for public supply, or approximately 27 percent of the total water withdrawal for all users within the District. A portion of the total withdrawal in Hillsborough County was exported to Pasco and Pinellas counties (Table A-3). In Pinellas County, 94 percent or 106 mgd was consumed for public supply purposes. Total water use in Pinellas County was 114 mgd in 2006.

Agricultural Water Use = 487 mgd

In 2006, agriculture water consumers in Polk, Manatee and Hillsborough counties used 102 mgd, 87 mgd and 68 mgd respectively. For a

summary of total estimated water withdrawal and use by county and category see Table 9.

The following tables provide an overview of agricultural and non-agricultural water use activities within the District. For more details, refer to tables 8, 9, Appendix A, tables A-1, A-2 and A-3.

Reported/Estimated Agricultural Permitted Water Withdrawal/Use (mgd), 2006		
Status	Quantity	Percent
Reported	298	61
Estimated	189	39
Total	487	100

Reported/Estimated Non-Agricultural Permitted Water Withdrawal/Use (mgd), 2006		
Status	Quantity	Percent
Reported	657	75
Estimated	225	25
Total	882	100

Reported/Estimated Total Water Withdrawal/Use (mgd), 2006		
Status	Quantity	Percent
Reported	955	70
Estimated	414	30
Total	1,369	100

Introduction

This report presents estimated freshwater use within the Southwest Florida Water Management District (District) for 2006 calendar year. Reclaimed water is excluded in this report but the 2006 Annual Reuse Report for the Southwest Florida Water Management District can be obtained by calling the District's Conservation Projects Section at 352-796-7211, Extension 4285.

The District relies on the Estimated Water Use Reports as a reference document for assistance with regulatory issues, water supply planning and development, review of water conservation programs, and evaluation of state-mandated comprehensive plans and impact studies of new development. Local and state government agencies, water utilities, various trade organizations, environmental groups, and other interested parties also find this data to be informative.

The District is one of five regional agencies charged with monitoring, regulating, managing, and protecting water resources in the state of Florida. Jurisdictional boundaries for the five water management districts are based on hydrologic features, such as watershed drainage basins, which may or may not coincide with county boundaries. The District encompasses all or part of the following sixteen (16) counties: Charlotte, Citrus, DeSoto, Hardee, Hernando, Highlands, Hillsborough, Lake, Levy, Marion, Manatee, Pasco, Pinellas, Polk, Sarasota and Sumter.

Figure 1 illustrates the sixteen (16) full and partial counties, which are within the District's jurisdiction. Data for each partial county only include the water use for that portion of the county within the District. Since 1989, the District has identified four geographic areas of special concern that have shown long term declines in hydrologic conditions. These four areas are designated "Water Use Caution Areas" (WUCAs, Figure 2) and referred to as Highlands Ridge WUCA, Eastern Tampa Bay WUCA, Northern Tampa Bay WUCA (Figure 3) and Southern WUCA (Figure 4).

In this report, estimated water use data are examined for six broad categories: Public Supply, Domestic Self-supply, Recreational/Aesthetic, Agriculture, Mining/Dewatering, and Industrial/Commercial. For all use categories except Public Supply, water use in this report is equivalent to water withdrawn from either surface or ground water sources. For Public Supply, actual water use can be different from the amount of water withdrawn, since system treatment losses and water used for environmental mitigation are accounted for in the Public Supply category. In addition, water used for Public Supply purposes is sometimes transferred from one permit to another. In this case, the first permit "withdraws" the water while the second permit "uses" the water.

In order to provide the reader with specific use data (i.e. citrus water use under the Agricultural Category), use code information was obtained for each permit. The data contained within the summary tables of each chapter should be used with discretion. In the event a permit has multiple use codes (i.e., strawberry and field crop); only a single code could be selected. Regulatory database comparisons were performed as a check on the quantities listed under each use code classification. In general, the estimated use code data presented in the report should be used only to roughly gauge specific water use activities.

Total water use in the District is also presented. Unless otherwise indicated, data is reported as an annual average daily rate in million gallons per day (mgd). For those counties which are only partially within District boundaries, (Charlotte, Highlands, Lake, Levy, Marion and Polk), the estimates include only water use data for portions of those counties which are within the District. When possible, the source of water is also identified to be ground water or surface water.

Four appendices are located at the back of this report. Appendix A contains detailed lists of water use for each permittee that reports pumpage data to the District. A separate table is provided for each water use category.

Appendix B contains estimated surface and ground water withdrawals for the District, each Water Use Caution Area and for the Northern Tampa Bay Water Resource Assessment Project (WRAP) Area (Figure 5). Appendix C identifies the total permitted quantities of surface and ground water by county in the District.

Tables C-2 through C-6 identify permitted quantities of water use for each WUCA and the Northern Tampa Bay WRAP. Finally, Appendix D contains historical water use for permits greater than one million gallons per day for each category. In addition, a ten-year Public Supply per capita comparison is presented in Table D-6.

Estimating freshwater use in the District requires the compilation and refinement of unpublished data contained in the District's Water Use Permit (WUP) files and Regulatory Database System (RDBS). However, these records contain at least three significant limitations of possible interest to the reader.

First, entities using less than 100,000 gallons per day are not necessarily required to have a permit, thus data for their use are not always available. Second, not all WUP holders are required to report pumpage amounts as a condition of their permit. Third, due to treatment losses and water transfers between Public Supply permits, the amount and location of reported pumpage does not necessarily coincide with the amount and location of actual end use.

In the case of a permit that does not report water withdrawal to the District, an estimate of pumpage is calculated. Unfortunately, some small permits that have been estimated may not actually be pumping water (due to a well not fully constructed, seasonal crop rotation, etc.). Because of the time involved to check the background of every permit's estimated water use, error may be present in the data tables contained within this report. However, those errors are believed to be small when compared to the total water use for the District.

The RDBS is continuously changing as new permits are assigned and existing information is updated; the data presented in this report reflects only a "snapshot" in time. The RDBS is queried for data that were present during one of the final days in December for the year of the report.

Supplemental sources of data were reviewed for this report to investigate water use within the Public Supply category. Valuable references include an annual Public Supply permittee survey, population studies from the University of Florida's Bureau of Economic and Business Research (BEER), and the District Regional Water Supply Plan (RWSP, 2006). Submittal of Public Supply Permittee Survey requests detailed transfer, treatment and population information for each permittee's service area. County-level population data was derived from BEER information. The Public Supply permittee survey is voluntary in areas outside of a WUCA.

The District has prepared water use estimate reports since 1984. Through 1986, the preparation of these reports was a cooperative effort between the District and U.S. Geological Survey (USGS). Beginning in 1987, the District has published these reports on an annual or bi-annual basis. The data found in past reports represented the summation of reported pumpage with the exception of Agricultural and Domestic Self-supply categories.

Since the 1991-1992 edition, additional water use, previously not reported, was estimated for permits, which are not required to report pumpage. Furthermore, instead of using an indirect method to estimate agricultural water use (acreage multiplied by crop water use coefficients) as in previous years, agricultural water use estimates rely on the same methodology as all other categories of use. The detailed procedure used in this edition is documented in a separate publication, Water Use Estimating Procedure for the Southwest Florida Water Management District, December 1994.

The estimation process is briefly described below. In order to account for pumpage of non-reporting permits, a methodology has been developed based on the assumption that all permittees of a specific use type would use a consistent portion of their permitted quantities.

For each aforementioned water use category, pumpage of non-reported permits is estimated based upon the water use quantities for those permits that reported pumpage using the ratio of actual pumpage to permitted use. The ratio is applied to every permit and distributed to wells with no reported pumpage data. The water use category, size of permit, season of usage, and calendar year determine the ratio used.

For more information on data sources, the reader should consult individual data tables and the bibliography of this report. Estimation methodologies are summarized for each water use category in the appropriate chapter of this document. In addition, readers of this report should be aware that many factors affect freshwater usage including, but not limited to, weather, soils, economic conditions, water conservation, and the use of alternative water sources.

Water Use Caution Areas (WUCAs)

In the late 1980s the District realized that certain interim resource management initiatives could be implemented to help prevent existing problems in the Water Resource Assessment Project (WRAP) areas from getting worse prior to the completion of each WRAP (Figure 5). As a result, in 1989, the District established the Northern Tampa Bay (NTB), Eastern Tampa Bay (ETB), and Highlands Ridge (HR) WUCAs, or Water Resource Caution Areas (WRCAs) as they are referred to in Chapter 62-40, Florida Administrative Code (F.A.C.)

For each of the initial three WUCAs, a three-phased approach to water resources management was implemented, including: (1) short-term actions that could be put in place immediately, (2) mid-term or intermediate actions that could be implemented concurrent with the ongoing WRAPs, and (3) long-term actions that would be based upon the results of the WRAPs. Short-term actions for each WUCA included the establishment of a Work Group comprised of representatives from all types of water users within each WUCA (e.g., public supply, agriculture, industry), local governments, environmental representatives, and other interested parties. These Work Groups were convened to assist the District in the development of management plans for each WUCA.

The main goal of the management plans was to stabilize and restore the water resource in each area through a combination of regulatory and non-regulatory efforts. The plans were adopted in 1990 and 1991. Additional short-term measures included development of conservation plans, permitting using cumulative impact analysis, and requiring withdrawals from stressed lakes to cease within three years.

One of the primary means of implementing the WUCA management plans was through modifications to the District's water use

permitting rules for each specific WUCA. These modifications primarily addressed additional conservation requirements and investigation of alternative water sources for water use permittees. One significant change was the designation of the Most Impacted Area within the ETB WUCA, within which no net increase in permitted water use from the Upper Floridan aquifer was allowed. This would be accomplished by significantly limiting the issuance of new permitted quantities.

Southern Water Use Caution Area (SWUCA)

Realizing that the Southern Ground-Water Basin should be managed in a comprehensive fashion, the entire southern portion of the District encompassing this basin was declared the Southern Water Use Caution Area (SWUCA) in October of 1992 (Figure 3). The SWUCA encompasses approximately 5,100 square miles, including all or part of eight counties in the southern portion of the District. In response to growing demands from public supply, agriculture, mining, power generation and recreational uses, ground-water withdrawals steadily increased for nearly a century before peaking in the mid-1970s. These withdrawals resulted in declines in aquifer levels throughout the basin, which in some areas exceeded 50 feet. Although ground-water withdrawals have since stabilized as a result of management efforts, depressed aquifer levels continue

Figure 3 illustrates location of the Northern Tampa Bay, Eastern Tampa Bay, and Highlands Ridge Water Use Caution Areas (WUCAs).

The SWUCA encompassed the previously established ETB and HR WUCAs. As with the previous WUCAs, the District convened a Work Group to assist in drafting a management plan for the area. The Work Group concluded a year long series of meetings in late 1993. The District completed the management plan for the SWUCA in mid-1994, which included both regulatory and non-regulatory recommendations. To implement

the regulatory component, the District subsequently initiated rulemaking.

The proposed 1994 SWUCA rule had three main objectives, including: (1) significantly halt saltwater intrusion into the confined Upper Floridan aquifer along the coast, (2) stabilize lake levels in Polk and Highlands counties, and (3) limit regulatory impacts on the region's economy and existing legal users. The principal concept of the rules was to establish a minimum aquifer level and, because existing levels were below this minimum, to allow renewal of existing permits while gradually reducing existing quantities.

The rule also had a mechanism, referred to as reallocation, to allow the voluntary redistribution of existing permitted quantities to new uses and locations within the SWUCA. A number of parties filed objections to parts of the rule and an administrative hearing was conducted. In March 1997, the District received the administrative law judge's Final Order upholding the minimum Floridan aquifer level (and the science used to establish it) and the phasing in of conservation. However, the ruling on provisions for reallocation and preferential treatment of existing users was determined invalid. The scientific work conducted previously for the SWUCA and its implications for limited additional ground-water availability has been incorporated into the RWSP for 2006.

In 1998, the District initiated a reevaluation of the SWUCA management strategy in recognition that the reallocation and preference to existing legal users' provisions of the previously proposed rule were found invalid and the District elected not to appeal these provisions of the Final Order. This reevaluation was also promoted by a recognition that resource conditions in the SWUCA had improved and was based on: 1) a decline in permitted and actual water use and improved ground-water levels, 2) new legislative direction provided in 1997 that required water resource planning and development and provisions for a recovery and prevention strategy, and 3) recognition of the long-term nature of the resource

constraints. The SWUCA covers the portion of the District which is located approximately south of Interstate 4 and includes all of DeSoto, Hardee, Manatee and Sarasota counties, and parts of Charlotte, Highlands, Hillsborough and Polk counties (Figure 3). The area was designated as a water use caution area (WUCA) to manage water resources due to long-term declines in Floridan aquifer ground-water levels. The predominant water use categories in SWUCA are Public Supply and Agriculture. Consequently, considerable changes made to the SWUCA rules in 2003 resulted in reductions in the quantity of water permitted for supplementary irrigation needs. The new rules, which require at least 75 percent irrigation efficiency, impacted more than 90 percent of the irrigated acreage and associated demand within the SWUCA.

The current SWUCA rule, in effect as of January 2003, omits the citrus grove drive lane from the total irrigated acreage upon which permits are based, and changes the rainfall events to an average year. Historically, citrus was irrigated using overhead systems that covered a full acre with water. Now, most citrus is irrigated under the tree canopy. In the SWUCA, the District calculates citrus quantities based on a densely planted grove where all but a six-foot wide truck road between hedged rows is irrigated. This equates to 89.4 percent of each acre.

As a result of SWUCA rules, the District's water use permit rules were amended to include the following key provisions: (1) require all utilities within the SWUCA to adopt a water conserving rate structure by January 1, 2004; (2) require rate structure information describing fixed and variable charge rates, minimum quantity charges, block size and pricing, seasonal rates and applicable months, to be provided to each customer at least once a year; (3) require all utilities with permits that exceed 100,000 gallons per day to collect residential water use information beginning January 1, 2003; and (4) require all utilities to submit an annual report on their water use no later than April 1 of each year covering the preceding year.

In addition to the expanded conservation requirement for Public Supply mentioned above, the SWUCA I rules also imposed significant new requirements regarding water conservation plans for other uses. These new requirements are more stringent with respect to the degree of water conservation required and the amount of documentation of positive progress. Other new requirements, such as requiring more permittees to record and report their actual use in conjunction with their actual activity, limiting application rates for irrigation use, water audits and more comprehensive annual reports for public supply permittees, allow the District to better track progress toward water conservation.

In terms of agricultural and recreational uses, the SWUCA rules implemented January 1, 2003 include a significant conservation element in the drought credit system. This system, which applies to all crops and landscape materials except those that use plastic mulch, provides a permitted quantity suitable for average rainfall conditions, with an allowance of additional quantities during drought conditions and freezes. The drought credit system is constructed so that for any year where a permit holder uses less water than the average permitted quantity, the amount not used is set aside in an account for later use. This system provides a conservation incentive to conserve water quantities during average to wet periods for use during dry periods. It also holds a beneficial effect of reducing the permitted quantities in the SWUCA.

Northern Tampa Bay WUCA (NTBWUCA)

In 1989, the District's Governing Board declared an area encompassing parts of Hillsborough and Pasco counties and all of Pinellas County to be included in the NTBWUCA (Figure 3). The Governing Board took this action based on growing concerns about hydrologic impacts to wetlands, lakes, and rivers, resulting from ground-water withdrawals. Because the majority of ground-water use in the area is for public supply, most of the water resource impacts were located in

areas surrounding the major public supply wellfields. The NTB Water Resource Assessment Project (NTBWRAP) was initiated as part of the long-term goal of the NTBWUCA to assess water resource impacts and determine water availability for the area. While the NTBWUCA was delineated to include the principal areas where the water supply was being used, the NTBWRAP area was delineated to include areas of significant ground-water withdrawals and water resource impacts.

The NTBWRAP area encompasses approximately 1,500 square miles, including parts of Hernando, Pasco, Hillsborough, Polk counties, and all of Pinellas County. Ground-water withdrawals in the area have increased from less than 50 mgd in 1960 to more than 200 mgd in the 1990s. Prior to the 1950s, many of the wells used for water supply in coastal communities experienced saltwater intrusion. Because of this and in order to meet the increasing demands of the area, the production of ground water for public supply moved to inland areas. In 1996, the District completed the NTBWRAP and concluded that the major public supply well fields were responsible for the majority of observed impacts to lakes in the area. Though it was also concluded that regional saltwater intrusion was not a major concern in the area, it is possible that saltwater intrusion could occur on a local scale.

In October 1998, the District's Governing Board approved Minimum Flows and Levels (MFLs) for the NTB area, which included setting levels for 41 cypress wetlands and 15 lakes. Levels were also set for 7 Floridan aquifer wells for saltwater intrusion management. In February 1999, minimum flows were approved for the lower Hillsborough River. Since 1998, minimum levels have been adopted for 45 additional lakes in the NTB area. Concurrent with the District's efforts to establish MFLs in the NTB area, Tampa Bay Water and its member governments entered into an agreement with the District to reduce ground-water withdrawals from its regional well fields and

work towards recovery in areas where water resources had been impacted. This agreement, commonly referred to as the Partnership Agreement, established that ground-water withdrawals from Tampa Bay Water's central system well fields would be reduced from a high 158 mgd to 90 mgd by the end of 2008. The Partnership Agreement is one part of a plan adopted by rule (40D-80, F.A.C.) for environmental recovery in the NTBWUCA.

As part of the Partnership Agreement, the District combined all of the permits for Tampa Bay Water's central system well fields into one permit. Known as the Consolidated Permit, the permit requires an extensive water resource monitoring network around the individual well fields, along with many other data reporting and planning requirements. It is anticipated that Tampa Bay Water's monitoring network will address most of the data collection needs in and around major withdrawal centers, while the District's efforts will focus on the areas between and beyond Tampa Bay Water's withdrawal centers.

The District has committed to collect additional data to support the refinement and improvement of the MFL methodologies and to studying the benefits of using other management methods, such as augmentation, to achieve adopted MFLs. In 2010 the District must decide whether to re-adopt the current MFLs, or adopt new MFLs, and whether to adopt a second phase of the Recovery Strategy.

To accommodate coordination with local governments and agencies, the District established a Local Technical Peer Review Group (LTPRG) consisting of representatives from local and state agencies, municipalities, and other interest groups. The LTPRG will review hydrologic, biologic, and geologic studies in the NTBWUCA being performed by the District and other parties.

Additionally, the District has developed a plan to continue research and development of management plans to achieve recovery. This plan, known as the NTB II Scope of Work,

outlines data collection and research to 1) expand and improve data collection, 2) expand and evaluate existing MFL methods, 3) develop new MFL methods, 4) evaluate the effects of recovery, and 5) evaluate alternative management methods (including restoration projects, augmentation, and other such concepts).

Northern Tampa Bay Water Resource Assessment Project Area (NTBWRAP)

In the late 1980s, the District initiated a program to conduct Water Resource Assessment Projects (WRAPs) to assess water availability in several regions (Figure 5). These projects are detailed assessments of the water resources and include intensive data collection, monitoring and ground-water modeling to characterize hydrologic conditions and determine the effects of water withdrawals. There are five areas in the District for which WRAPs have been initiated. The first three WRAPs were initiated in the late 1980s and early 1990s for the NTB area, eastern Tampa Bay area, and Highlands Ridge areas.

In the NTB area, resource impacts included lowered water levels in lakes and wetlands, impacts to existing legal users and limited saltwater intrusion caused primarily by ground-water withdrawals from 11 public supply wellfields in the area. In the Highlands Ridge area, resource impacts included lowered lake levels and impacts to existing legal users, caused primarily by agricultural ground-water withdrawals in the area. In the eastern Tampa Bay area, resource impacts included saltwater intrusion into the confined Upper Floridan aquifer caused by ground-water withdrawals for agriculture, industry and public supply. In the mid-1990s, a fourth WRAP was initiated which covered the southern portion of the District and encompassed both the eastern Tampa Bay WRAP and Highlands Ridge WRAP areas.

The purpose of this WRAP was to assess the cumulative effects of all water withdrawals in the region. A fifth WRAP is being conducted for the Northern Planning Area. The eastern

Tampa Bay WRAP was completed in 1993 and the northern Tampa Bay WRAP was completed in 1996. These studies have helped to define the availability of ground-water resources in the Planning Region.

In 1999, the District initiated the Northern Tampa Bay Phase II investigation as a follow-up to the northern Tampa Bay WRAP. Through a series of projects, this study will continue assessments of the biologic and hydrologic systems in NTB area to support the ongoing development of MFLs, water resources recovery, water use permitting, and environmental resource permitting. Projects will include the further development of MFLs methodologies, assessments of various techniques for restoring water levels in surface-water features, and expanded biologic and hydrologic data collection. These studies will continue through 2010. As the ongoing WRAPs are completed, the results of these studies will be incorporated into future updates of the *Regional Water Supply Plan*.

Figure 5. Northern Tampa Bay Water Resource Assessment Project Area, 2006

Public Supply Water Use

Surveyed Public Supply Use = 568 mgd

In 2006, 568 mgd serviced approximately 4.77 million people, representing an annual average daily use of 119 gallons per capita per day (gpcd) (Table 1). The following pages describe and illustrate various water uses specific to Public Supply.

General Information

Public Supply water use includes the water distributed by public water systems and private water utilities throughout the District. It is important to note that the Public Supply category may include nonresidential customers such as hospitals or restaurants in addition to individual residential customers. These nonresidential users are estimated under the Public Supply category because they are not self-supplied and do not report their individual water use to the District. For a utility's percentage of nonresidential customers, refer to Table A-2 in Appendix A.

Ground water is the principal source of Public Supply water in the District, with most ground water coming from Floridan aquifer. The surficial and intermediate aquifers are ground water sources in some southern areas, such as Sarasota and Charlotte counties, where the Floridan is either not readily accessible or has poor water quality.

For all use categories except Public Supply, water use in this report is synonymous with water withdrawn from either surface or ground water sources. Treatment system losses, transfer of water from one permit to another, and water used for environmental mitigation are all accounted for in the Public Supply category. Therefore, actual water use for Public Supply may be different from water withdrawn.

Five counties in the District depend significantly on surface water sources for Public Supply water use. The City of Punta Gorda in Charlotte County relies on the Shell

Creek Reservoir. Portions of unincorporated Charlotte, DeSoto and Sarasota counties rely on surface water sources related to Shell Creek and the Peace River. The Hillsborough River supplies water to the City of Tampa and Hillsborough County. Manatee County and City of Bradenton Public Supply systems depend almost completely on reservoirs known as Lake Manatee and Evers Lake. In addition, portions of Sarasota County depend on surface water transferred from Manatee County. The majority of Public Supply permits identified in this report are required to regularly report water withdrawal quantities as a condition of their Water Use Permit (WUP), as specified in Chapter 40D-2 Florida Administrative Code (FAC). This reporting condition typically applies to systems with an average permitted withdrawal quantity of 100,000 gallons or more per day, a maximum permitted withdrawal quantity of one million gallons or more on any single day, or a six-inch or larger diameter well.

Water Use

Per Capita (average daily use) = 119 mgd
--

In 2006, approximately 568 mgd were used by Public Supply systems as shown in Table 1. Of this amount, 558 mgd (98%) were metered and reported as a condition of Public Supply Water Use Permits, while an additional 11 mgd were estimated (Table 1, Column 4). In 2006, approximately 442 mgd (68%) percent of the total Public Supply withdrawals was pumped from ground water sources (Table B-1, Public Supply and Domestic Self-supply).

At the county level, Hillsborough and Pinellas counties used approximately 144 mgd and 106 mgd, respectively, for public supply purposes (Table 1).

Table 1 identifies total Surveyed Public Supply water use throughout the District. The first two columns, "Surveyed P.S. Water Use" and "Surveyed P.S. Population" are taken directly from Table A-1, which individually lists public suppliers and their service population by county. The majority of the data was gathered

from the annual Public Supply Permittee Survey. All other sources are identified in the Appendix A. The "Gross Per Capita" is simply the division of Public Supply water use by population.

Additional Estimated Water Use

In addition to recording the water used by those Public Supply systems, which are required to report pumpage and the corresponding population served, Table 1 provides estimates of the water used and population served by Public Supply permittees who do not have a pumpage-reporting requirement. The calculation of additional estimated Public Supply water use data was based on the assumption that permits not required to report pumpage use the same percentage of their average daily permitted quantity as those permits which are required to report pumpage. In other words, "reported as a percentage of permitted" coefficients were developed, and then these coefficients were applied to the average daily permitted quantities of those Public Supply permits which are not required to report pumpage.

It was also assumed that the people served by permits not required to report pumpage have the same water use habits, and thus the same per capita water use, as the people served by permits which are required to report pumpage. For each county, additional estimated Public Supply population served was calculated by dividing the additional estimated Public Supply water use by the reported unadjusted gross per capita water use data for that county. The results of this estimation effort are included in Table 1. In 2006, the additional Public Supply estimated water use was 11 mgd. Pasco County used approximately 3 mgd from small-quantity permittees. Polk County used 2.8 mgd, also from small-quantity permittees.

It is important to note that some residential customers receiving water from a public supplier may have a well for landscape irrigation purposes only. It is difficult to estimate how much water is used in this manner. Those withdrawals are not included or estimated in these reports.

Additional Reported Water Use

Public Supply permits greater than 0.1 mgd account for more than 99 percent of the total publicly supplied water in the District. The remaining group of small Public Supply permits (less than 0.1 mgd) that reported pumpage to the District was not listed in Table A-1. However, this group of small Public Supply permits was accounted for in Table 1 under the column "Additional Reported Water Use". During 2006, the additional reported Public Supply water use was approximately 4 mgd. In the same category, Pasco County shows the largest use with approximately 1 mgd.

Total Public Supply Water Use

From Table 1, the total Public Supply water use was estimated to be 568 mgd, serving approximately 4.77 million people during calendar year 2006. A comparison of county-level Public Supply water use is illustrated in Figure 6. Figure 7 compares monthly estimated Public Supply water use and rainfall.

Compared to other counties, Hillsborough County was the largest user of water for Public Supply purposes during 2006, consuming approximately 25 percent of total Public Supply use or more than 144 mgd. Pinellas County used approximately 19 percent or 106 mgd and Polk County consumed 81 mgd or 14 percent for its Public Supply water use.

Analysis of Public Supply Water Use

As stated earlier, supplemental information for this water use category was collected through a survey of active Public Supply permits within the District.

Public Supply permits within any of the District's Water Use Caution Areas are required to answer the survey's inquiries regarding water use and submit them to the District; all other responses are returned on a voluntary basis only. The annual survey requests information, such as service population, water loss associated with treatment, permit-to-permit transfers, and

system-level water use demand data. With this information, the actual water use by the Public Supply system was estimated and expressed as per capita water use. A summary of this data can be found in Table A-1, for both years.

In general, Public Supply water use identified in Table A-1 is quantified in terms of “gross per capita” and “adjusted gross per capita.” To measure water use efficiency, these calculations take into consideration treatment system loss, significant uses, environmental mitigation use, and/or reuse and desalination credits. The following sections will discuss in detail the respective water uses.

Gross per Capita Water Use

Gross Per Capita is the simple calculation of dividing gross use by service area population. Table A-1 contains the information required to convert permit-specific withdrawal quantities to unadjusted gross per capita water use data. Please note if a permit serves a population in more than one county, or if its use occurs in a county other than the county of withdrawal, it is possible for the same permit number to occur in more than one county within this table.

Table A-1 lists the amount of raw water withdrawn, population served and the primary water source (ground water or surface water) for each permit. It also provides permit-specific details about water transfers, both imports and exports. Loss associated with water treatment, typically reverse osmosis (RO) and desalination concentrate (byproduct water that contains high levels of salt and other impurities), is also shown. The finished water actually made available for use by customers of each permit is then determined by subtracting exports and treatment loss from the sum of withdrawals and imports. This total can be found under the “gross use” column.

County-level summaries of reported Public Supply gross water use and population served are listed in Table 1. The District’s average gross per capita water use was 119 gallons per capita per day (gpcd) during 2006. Of all

water utilities listed in Table A-1, cumulatively 50 percent have an unadjusted gross per capita water use equal to or less than 119 gpcd and 34 percent of the utility show an unadjusted gross per capita less than 95 gpcd. Utilities having unadjusted gross per capita water use greater than 200 gpcd account for approximately 3 percent.

High per capita water use is more common in master-metered communities. One possible reason is that people who are not held accountable and charged for the amount of water they use have no economic incentive to be efficient. Affluent areas with high discretionary outdoor water use and new developments that are fully irrigated but only partially populated also tend to have high per capita water use.

Low gross per capita water use is more common in communities with high water prices and those permittees using the “dwelling unit” population estimation method which simply takes the number of dwelling units in a utility’s service area and multiplies that number by an average number of people per household. This method does not adequately correct for a highly seasonal residential customer base. The method incorrectly assumes that all dwelling units are occupied year around and thus gives an unrealistically low per capita value.

The accuracy of system-level per capita water use data is highly dependent on the quality of population information used in the calculation. Seasonal (part-time) residents can bias the results if the fluctuation is not accounted for in the service population data. In recognition of this fact, “functional” population information was requested in the voluntary survey. “Functional” refers to a seasonally adjusted annual average number of persons in the county (year-round residents plus fraction of the seasonal-only population).

Per capita calculations can also be affected by population data that is skewed by double reporting of population in overlapping Public Supply systems or incomplete population estimation methodologies. In addition, permit-

level per capita amounts may not be directly comparable when a system supplies a large amount of water to non-residential users, is subjected to large unaccounted for water use patterns (such as a major pipeline failure), or has access to reuse. In previous reports, this per capita was also referred to as unadjusted gross per capita.

Adjusted Gross Per Capita Water Use

When Gross Per Capita water use is refined by subtracting “significant use”, “environmental mitigation” water, it is termed “Adjusted Gross Per Capita.” Significant use refers to the sum of the average consumption of all non-residential water customers who each use at least 25,000 gpd or five percent of system use, such as commercial users.

Environmental mitigation refers to the pumping of water to replenish lakes and wetlands, which have been impacted by nearby Public Supply withdrawals, but only when this replenishment is required as a condition of a water use permit.

The refinement of per capita water use data has a special purpose, particularly in the District’s declared Water Use Caution Areas. In these portions of the District, Public Supply permittees are required to meet certain per-capita-water-demand-reduction goals.

Adjusted Gross per capita data allow for more equitable permit-to-goal as well as permit-to-permit comparison because it compensates for the effects of large non-residential users whose consumption may benefit an area, which extends far beyond a specific permittee’s service territory. Also, when communities fail to report a significant use (such as a power plant) on the voluntary survey, Table A-1 may show an unusually high gross per capita figure. In Table A-1 Public Supply Adjusted Gross Per Capita is examined for only those permittees located within a WUCA. During calendar year 2006, adjusted gross per capita within the District averaged approximately 108 gpcd (Column 11, Table A-1). In previous reports, this per capita was also referred to as the compliance per capita.

Residential Per Capita Water Use

This measurement accounts for the portion of publicly supplied water that is used for residential purposes only. The percentage of residential water use reported to the District by a utility is multiplied by their total water use to quantify how much water is used for residential purposes only. Residential Per Capita differs from Unadjusted Gross Per Capita and Adjusted Gross Per Capita because it does not include any non-residential uses.

Due to the limitation in billing systems, not all public supply systems are able to separate residential from other types of water use. Calculation of residential water was performed in Table A-2. If a utility supplies a large number of non-residential customers with water, their residential per capita will be significantly lower than their Unadjusted Gross Per Capita. For example, in 2006, the 110 gpcd (Table A-1) gross per capita water use of the Manatee County Public Utilities service area is brought down to a residential per capita of 78 gpcd when non-residential customers are removed (Table A-2).

For those permittees able to provide sufficient demand details, the average residential per capita water use was estimated to be 84 gpcd during calendar year 2006 (Table A-2). County averages of residential per capita water use are compared in Table 2.

Unaccounted for Water

Unaccounted for water (also referred to as “UAW”) is the portion of water that enters the distribution system and is “lost.” Several situations can contribute to UAW, including transmission pipeline failures, valve box leaks, unauthorized service connections, and production meters that are over-registering. Water used for customary purposes, such as firefighting and line flushing that can be estimated, is considered “accounted” and, therefore does not need to be included in a permittee’s UAW amount.

Although a high UAW value generally indicates the need to address one or more of

the problems listed above, a low UAW value does not necessarily indicate a tight, efficiently run system. If the source (withdrawal) meters are under-registering, a permittee may falsely appear to have a low or possibly negative UAW (i.e., the system bills for more water that it supposedly produces). Production and customer meter accuracy can only be ensured through periodic testing. The unaccounted for water use associated with permits that reported UAW data was also studied in the Table A-2. It shows that a total of 29 mgd from 529 mgd of system production (approximately 5 percent) was considered unaccounted.

Public Supply Water Transfers

Geographical conditions and population growth differences necessitate inter-county and/or inter-permit water transfers in some parts of the District. Such transfers will play an increasingly important role as more emergency interconnect systems are constructed and regional water supply authorities develop additional wholesale arrangements with their member systems.

It is very challenging to trace the original amount of withdrawn water to its final use destination, especially when water is imported and exported among permits and/or across county boundaries. Table A-3 provides some detail of permit-to-permit water transfer. In the District, approximately 407 mgd was exchanged among water use permittees in 2006 (Table A-3).

Monthly Water Withdrawal

Because it is difficult to determine actual monthly Public Supply water use due to monthly variations in water transfers and treatment losses, the estimated withdrawal pattern is studied instead in this report. Monthly withdrawals reported for Public Supply in the district are shown in Table A-4.

Figure 6. Surveyed and Estimated Public Supply Water Use (mgd) by County, 2006

Figure 7. Average Rainfall (inches) and Estimated Public Supply Water Use (mgd), 2006

Domestic Self-supply Use = 40 mgd

Domestic Self-supply Water Use

In 2006, approximately 40 mgd was used for Domestic Self-supply purposes within the District. Because the users included in this category are not required to have Water Use Permits, the estimates are indirectly calculated based on available population estimates and conceptual water use data (Table 2).

It is important to note that the methodology for determining functional population in Table 2 was changed in 1998, resulting in a significant decrease in estimated water use for Domestic Self-supply purposes. The estimation for seasonal population for most counties was decreased based on data obtained from each county's comprehensive plan. It is believed that in prior years the Domestic Self-supply population was overestimated resulting in an unrealistically high water use for the category.

General Information

The Domestic Self-supply category estimates the freshwater consumption from individual wells and water supply system, which are too small to be required to have a District water use permit. In other words, this category estimates residential water use not accounted for by water supply systems studied in the Public Supply category. These residential users may be in rural settings or in suburban or urban areas, which are not served by a public supply system. It is assumed that large non-residential users are separately addressed in the Recreational/Aesthetic, Agricultural, Industrial/Commercial, and Mining/Dewatering sections of this report.

All Domestic Self-supply water use is assumed to be fresh ground water. Domestic Self-supply water use estimates are based on a combination of population for a given county is calculated as the difference between the county-level functional population and the total Public Supply population served for that same county (Table 2, Column 4). "Functional Population" refers to a seasonally adjusted

annual number of persons in the county (year-around residents plus a fraction of the seasonally-only population).

Assuming that self-supplied water users have the same water use habits and thus the same per capita water use as the people served by the Public Supply systems, the residential per capita data from Appendix A-2 is employed to calculate Domestic Self-supply water use for each county. Water use is estimated by multiplying the residential per capita water use by the Domestic Self-supply population. It is believed that very high or very low residential per capita values reported in Table 2 may be the result of insufficient data availability for a county rather than extremely different residential water use habits from one county to another.

This section replaces the "rural" category used in earlier editions of this report. To directly compare Domestic Self-supply and "Additional Estimated Public Supply" values in the previous sections.

2006 Data

Table 2 lists each county's population and water use details. Domestic Self-supply water use among counties is compared in Figure 8. Marion, Citrus and Pasco counties consumed the most water in this category, with estimated 9 mgd, 8.7 mgd and 5 mgd, respectively.

Because Domestic Self-supply water use is estimated based on Public Supply data, it is assumed that the monthly use pattern tracks that of Public Supply. Consequently, a separate monthly fluctuation is not included in this report.

*Data only for that portion within the District.

- (1) Derived from Florida State and County Population Estimated (April 2006) and Projections for 2006-2025. Bureau of Economic and Business Research – University of Florida, 2006 and August 2001 Regional Water Supply Plan.
- (2) From Table 1, "Total P.S. Population" column.
- (3) Estimated as "Functional Population "minus" P.S. Served Population."
- (4) Extracted from A-2, "Residential Per Capita" column. When data unavailable for a county, the District's average was used. "DISTRICT TOTAL" "Residential Per Capita" equals District's average or 84 mgd.
- (5) Calculated as Self-supply Population multiplied by the SWFWMD Average Residential Per Capita.

Figure 8. Estimated Domestic Self-supply Water Withdrawal (mgd), by County, 2006

Recreational/Aesthetic = 82 mgd

Recreational/Aesthetic Water Withdrawal/Use

Recreational/Aesthetic water use within the District was estimated to be 82 mgd during 2006 (Table 3).

Recreational/Aesthetic category examines the self-supplied freshwater used for the irrigation of golf courses, cemeteries, parks and other large landscape. It does not include reclaimed water that is used for those same purposes. In addition to the amounts estimated in this category, it should be noted that freshwater is also used for similar purposes as integral components of other use categories, especially Public Supply. For example, it is common for the Public Supply permits associated with a new residential development to also serve the development's golf course. Also, there are Recreational/Aesthetic freshwater users that are too small to need a District permit.

General Information

For the purposes of this report, Recreational/Aesthetic use is divided into three major use types: golf courses, cemeteries/parks/playgrounds, and other uses. Water use permit data were collected and sorted by predominant use type for permits that are required to regularly report pumpage.

2006 Data

Recreational/Aesthetic water use within the District was estimated to be 82 mgd during 2006. Of this amount approximately 65 mgd was withdrawn from ground water sources, the remaining 17 mgd was withdrawn from surface water sources. As stated earlier, these amounts do not include reuse, use associated with Public Supply permits, and small self-supplied entities.

Table 3 provides county-level use data for each major type within the Recreational/Aesthetic category. Regulatory database comparisons were performed as a

check on the quantities listed under each type. This information is illustrated in Figure 9. Hillsborough County had the highest county-level use, with approximately 17 percent or 14 mgd of freshwater use estimated in this category. Sarasota and Polk counties consumed approximately 12 mgd and 11 mgd of water for Recreational/Aesthetic use, respectively.

Golf Courses = 48 mgd

From a different perspective, Figure 10 examines water use for different categories. It indicates that golf courses constitute the largest water use within the Recreational/Aesthetic category, representing approximately 48 mgd or 59 percent of the total. Cemeteries/Parks/Playgrounds was also a significant water use within this category using nearly 25 mgd or 30 percent of the total.

Table A-5 provides permit-specific water use data in detail for this category, grouped by county. The table contains Water Use Permits (WUP) number, permittee name, average amount of water used per day, permitted use, withdrawal source, and type of major use.

The District's estimated monthly Recreational/Aesthetic water use compared to rainfall is presented in Figure 11. Estimated monthly Recreational/Aesthetic water use at the county level can be obtained from Table A-6.

Several golf courses within the District receive reclaimed water from local wastewater treatment facilities. A description of reclaimed water sources and demands can be found in the District's *2006 Annual Reuse Report*. In addition, a complete description of reclaimed water projects funded by the District, in cooperation with local governments, can be found in the annual *Retrofit Programs, Reuse Projects, and Outdoor Water Conservation Efforts Summary Report*. A copy of either report can be obtained by calling the District's Conservation Projects Section of the Resource Projects Department at 352-796-7211, extension 4285.

Figure 11. Average Rainfall (inches) and Estimated Recreational/Aesthetic Water Withdrawal/Use (mgd) by Month, 2006

Agricultural Water Use = 487 mgd

Agricultural Water Withdrawal/Use

Agricultural water withdrawal/use was estimated to be 487 mgd in the District during 2006. This category encompasses freshwater withdrawal/use related to agricultural production. Reclaimed water is increasingly being utilized for agricultural irrigation; however, its quantity is not included in this report.

General Information

Historically, agricultural water use estimates were calculated indirectly based on estimated production acreage and crop water use coefficients. However, since 1989 the District has required agricultural water use permits of 100,000 gallons per day and greater to be metered in the Eastern Tampa Bay and Highlands Ridge WUCAs and 500,000 gpd and greater in other areas of the District.

The District funded the purchase and installation of meters for existing agricultural withdrawals. This program was completed in 1994 with the installation of more than 1,300 meters. In addition, the District has funded the reimbursement of approximately 860 additional agricultural meters to permittees. Because many permits have more than one withdrawal point, several meters may have been installed for a single permit. Monthly water withdrawals are read by the permittees and submitted to the District to be entered into the District's Regulatory Database system (RDBS), and used as a basis for the estimation of agricultural water use. Beginning in 1991, this report employed pumpage data from the RDBS to approximate agricultural water use.

Estimated/Reported Agricultural Water Withdrawal/Use (mgd), 2006		
Status	Withdrawal/Use (mgd)	Percent of Total
Reported	298	61%
Estimated	189	39%
Total	487	100%

Despite these efforts, a large number of withdrawal points are still not metered. In 2006, 61 percent (298 mgd) of agricultural water use was reported, leaving 39 percent (189 mgd) to be estimated by the District. The number of agricultural permits required to meter and report pumpage has increased over the years. From 1991 to 2006, this number has increased from 292 to 1,257. As more agricultural permits report pumpage, estimation of water use will become more accurate.

Agricultural water use permits are prepared for the following major crop types: citrus, sod, ornamental, tomatoes, vegetables, pasture, field crops, melons and strawberries. The crop type labeled "Sod" was previously listed as "Turf"; the name change should eliminate confusion with landscape irrigation.

2006 Data

Agricultural water use during 2006 is estimated to be 487 mgd, with approximately 96 percent or 466 mgd withdrawn from ground water sources. Table 4 summarizes water use by county and crop type. Regulatory database comparisons were performed as a check on quantities listed for each crop type. Permit specific water use data for all agricultural permits reporting pumpage to the District is presented in Table A-7. County-level data are illustrated in Figure 12, and crop type data are shown in Figure 13.

In 2006, Polk County accounts for the largest agricultural water use of any county in the District with approximately 21 percent or 102 mgd. Citrus with 93 mgd of water use is the predominant crop in Polk County. Manatee, and Hillsborough counties used 87 mgd and 68 mgd respectively. Manatee County uses the majority of its water for tomato production while DeSoto County's agricultural water use is primarily for the production of citrus. Hillsborough County's main agricultural productions include strawberry (17 mgd), tomato (15 mgd) and citrus (15 mgd).

Agricultural Water Withdrawal/Use by County (mgd), 2006			
District	Hillsborough	Manatee	Polk
487 (100%)	68 (14%)	87 (18%)	102 (21%)

The leading crop in terms of estimated water use during 2006 was citrus, which used 57 percent (279 mgd) of the total water used for agricultural purposes. Tomatoes consumed the second largest amount of water, averaging 65 mgd or 13 percent of the total for its production.

Water Withdrawal/use by Leading Agricultural Crops (mgd), 2006				
Citrus	Tomato	Vegetable	Sod	Ornamental
279 (57%)	65 (13%)	26 (5%)	22 (5%)	20 (4%)

Extracted from Table A-8, Figure 14 illustrates the monthly total estimated agricultural water use in 2006. For comparison purposes, monthly rainfall is also shown on Figure 14. For more information regarding agricultural water withdrawal/use, please refer to tables 4, 8, 9, A-7, A-8 and B-1.

Total Mining/Dewatering Use= 41 mgd

Mining/Dewatering Water Withdrawal/Use

Approximately 41 mgd of freshwater was withdrawn for mining/dewatering purposes in the District during 2006 (Table 5). Of this amount, 37 mgd (91 percent) was withdrawn from ground water sources and 4 mgd (9 percent) was withdrawn from surface water sources. Determining the consumptive use associated with mining/dewatering operations can be a challenging exercise, however. Inserted tables in this text provide only a snapshot of the data. For more information regarding Mining/Dewatering, please refer to tables 5, 8, 9, A-9, A-10 and B-1.

Total Mining/Dewatering Water Withdrawal/Use (mgd) by Source, 2006			
Year	Total	Ground Water	Surface Water
2006	41 (100%)	37 (91%)	4 (9%)

General Information

The Mining/Dewatering water use category studies the freshwater utilized by self-supplied mining operations, which are required to regularly report water withdrawals as a condition of their Water Use Permit (WUP). In the District, mining operations primarily produce phosphate, ore, limestone (lime rock), sand (typically associated with cement manufacturing), and peat.

Total Mining/Dewatering Water Withdrawal/Use (mgd) by Type, 2006				
Year	Phosphate	Limestone	Sand	Other Uses
2006	25 (60%)	12 (30%)	2 (5%)	2 (5%)

"Dewatering" refers to the lowering of the local ground water table through a mine cut or other manmade surface water body. Typically, dewatering is the result of removing water from a mining site to facilitate the process of locating and extracting the desired product. Due to the nature of this process, care must be taken to avoid duplicate reporting of the amount of water involved. For instance, if water is pumped out of an active mining pit or

pond and into a nearby surface water body, it may quickly return and be pumped repeatedly when there is a strong underground hydraulic connection between the withdrawal point and receiving area.

Mining/Dewatering permits issued by the District in the past have simply been based on pumped water. Unfortunately, this permitted value includes water that has been pumped from pond to pond, in essence, recycled, not consumed. However, permits are now being issued with new criteria that better reflect the actual use. Permitted quantities are now based on the size of the pumps within the operation and the percentage of water in the final processed product. It is hoped this new permitting procedure will eliminate an unrealistically high water use value for permits within this category. It is anticipated that by 2010 all permits in the Mining/Dewatering category will reflect this new, more accurate, criteria.

Consideration must also be taken to characterize the source of water associated with dewatering. Often, what might be considered a surface water body on the basis of appearance is actually a manmade opening that is deep enough to expose ground water. This report attempts to carefully reflect the source of each permit's withdrawals.

In addition to simply being temporarily or permanently removed to facilitate extraction, water may also be used to transport mined products. For example, some products are crushed and combined with water to create slurry and pumped into a vehicle or processing facility. Water may also be used to internally produce the electric power needed by a mining operation, a process known as co-generation. Water is also used to wash or otherwise pre-process the mined products as well as to maintain equipment and vehicles.

2006 Data

Table 5 summarizes county-level water use by product type. Regulatory database comparisons were performed as a check on the quantities listed under each product

classification. In 2006, as shown in Figure 15, Polk, Hernando and Hardee counties had the largest county-level water use in this category. These three counties account for a combined total of more than 36 mgd (90%) of water use for the Mining/Dewatering category. Table A-9 presents permit-specific water withdrawal data for Mining/Dewatering use, grouped by county. Table A-10 reflect average monthly withdrawals by county and source, and Table 5 shows withdrawal and use in this category by county, source and use type, in 2006.

Figure 16 shows that phosphate mining was the single largest freshwater use in the Mining/Dewatering category during 2006, an estimated 25 mgd or 60 percent. Limestone mining also contributes significantly by withdrawing an estimated 12 mgd or 30 percent of water use in this category. Sand mining was estimated at approximately 2 mgd or 5 percent of water use. Estimated monthly water use for Mining/Dewatering is depicted in Figure 17.

Figure 17. Average Rainfall (inches) and Estimated Mining/Dewater Water Withdrawal (mgd) by Month, 2006

Industrial/Commercial Use = 74 mgd

Industrial/Commercial Water Withdrawal/Use

Industrial/Commercial water use in the District averaged approximately 74 mgd during 2006. The Industrial/Commercial water use category includes non-farm, non-mining businesses that have a self-supplied source of water; for example, hospitals, schools, and cement plants. This category does not include water use for Industrial/Commercial purposes that is purchased from Public Supply systems, because those amounts are an integral component of the Public Supply estimates. It also does not include seawater or reclaimed water, which is used for power generation purposes. Inserted tables in this text represent only a snapshot of data for this category of water use. For more information, refer to tables 6 and A-11.

SWFWMD Industrial/Commercial Total Water Withdrawal/Use (mgd), by Source, 2006			
Year	Total	Ground Water	Surface Water
2006	74 (100%)	58 (78%)	16 (22%)

Selected Industrial/Commercial Water Withdrawal/Use Categories (mgd), by Category, 2006				
Year	Product manufacturing	Power Generation	Food Processing	Other Uses
2006	32 (44%)	30 (41%)	4.5 (6%)	5 (7%)

General Information

Industrial/Commercial water use in the District includes the following industrial groups: product manufacturing, food processing or packaging, power generation, and other industrial/commercial uses (typically general manufacturing, or equipment cleaning operations, self-supplied stores, car washes, laundries, schools, prisons, and other commercial building and businesses).

"Product Manufacturing" has replaced the category "Chemical Manufacturing," found in previous reports. The "Product Manufacturing" category includes water use for chemical

manufacturing in addition to cement, asphalt, and other general manufacturing processes.

2006 Data

Table 6 presents county-level water use by industry groups. Regulatory database comparisons were performed as a check on the quantities listed under each industry classification. Industrial water use data by permittee is detailed in Table A-11. In 2006, as shown in Figure 18, Polk County is the largest user for Commercial/Industrial purposes, accounting for more than 46 mgd or 63 percent of this category. Hillsborough County shows approximately 10 mgd of use or 13 percent of this category. The most predominant use of Industrial/Commercial water in Polk and Hillsborough was for product manufacturing purposes.

Figure 19 illustrates Industrial/Commercial water use by category during 2006. Of the total 74 mgd, Product Manufacturing represents the highest amount of water used, more than 32 mgd or approximately 44 percent of the total. Power Generation consumed the second largest amount of water, withdrawing approximately 30 mgd or 41 percent. Food Processing, General Commercial and Other Uses were other significant water use categories collectively withdrawing 16 percent or about 11 mgd of the total in 2006.

Table A-12 summarizes estimated monthly Industrial/Commercial water use and rainfall data by county. The estimated District total Industrial/Commercial water use during each month of the 2006 is depicted in Figure 20. For comparison purposes, monthly rainfall data is also included in Figure 20.

Figure 20. Rainfall (inches) and Estimated Industrial/Commercial Water Withdrawal/Use (mgd) by Month, 2006

Total Water Withdrawal/Use

The majority of data found in this report was extracted from the District's Regulatory Database System (RDBS). The Database has increased significantly in size through the years and continues to become more valuable when estimating water use. To provide some insights into the Regulatory Database, from 1992 to 2006, the number of permits reporting water use to the District has increased from 1,164 to 1,842. Although the number of permits reporting water use represents 21 percent of the total number of permits issued (8,643) in 2006, the water use of non-reporting permits represents only 29 percent of the total water use in the District. In 2006, the number of permits was 8,643 and total number of reporting permits was 1,842 (Table 7). Table 8 identifies the quantities of reported versus estimated water use by county and category of use in the District.

2006 Data

In 2006, an estimated 1.37 billion gallons of freshwater was withdrawn each day in the District. This amount represents enough water to fill approximately 105,385 average residential swimming pools (13,000 gallons) each day. Total water use data for calendar year 2006, found in Table 9, was defined by summarizing the county-level values presented in earlier sections of this document.

Total Water Use

Table 9 shows the amount of water used and withdrawal in each county. The "Total (Withdrawal)" column differs from the "Total (Use)" column for each county because a portion of the water used for Public Supply purposes is transferred to and consumed in counties other than where it originated. For 2006, when this transfer was taken into consideration, Polk, Hillsborough and Manatee counties were the largest water users with 261 mgd, 238 mgd and 143 mgd, respectively.

Total Water Use (mgd) in Hillsborough, Manatee and Polk Counties, 2006				
Year	District	Hillsborough	Manatee	Polk
2006	1,291 (100%)	238 (18%)	143 (11%)	261 (20%)

Total Water Withdrawal

In 2006, Hillsborough County withdrew an estimated 369 mgd or 27 percent of the District's total water withdrawal (Table 9). This amount reflects freshwater-intensive economic activities for a variety of uses. Polk County withdrew an estimated 260 mgd or 20 percent with respect to the total water withdrawal. In Hillsborough, more than 144 mgd were withdrawn for Public Supply purposes.

Total Water Withdrawal (mgd) in Hillsborough, Manatee and Polk Counties, 2006				
Year	District	Hillsborough	Manatee	Polk
2006	1,370 (100%)	369 (27%)	142 (10%)	260 (19%)
Total Water Withdrawal (mgd) , by Source, 2006				
Year	Total	Ground Water	Surface Water	
2006	1,370 (100%)	1,069 (78%)	301 (22%)	

Total water withdrawal and use are examined from a different perspective in Figure 21. This figure reflects the complex composition of freshwater withdrawal and use by County within the District. In 2006, Public Supply water use represented the largest single withdrawal category, including Domestic Self-supply, with approximately 686 mgd (50 percent) of the total freshwater withdrawal. In 2006, agricultural water withdrawal amount was approximately 487 mgd (36 percent) from the total withdrawal within the District. Figure 22 illustrates the total amount of water withdrawn by category of use within the District in 2006. Figure 23 illustrates the amount of ground water versus surface water withdrawn by each county. Hillsborough County withdrew the most surface water in the District with a total amount of 369 mgd in 2006; Hillsborough's population growth significantly contributed to this amount. Polk

County withdrew the most from ground water sources with 248 mgd, in 2006. Ground water versus surface water withdrawals by category is presented in Figure 24. District-wide, the majority of ground water is withdrawn for Public Supply purposes and Agricultural use. For more information, please see Table B-1.

Summary

During 2006, approximately 1.37 billion gallons per day of freshwater were withdrawn on an average day in the District. Public Supply constitutes the largest use category at this time. County-wide, Hillsborough withdrew the most freshwater for use to support its diverse industries and population growth. Multi-year water use trends depend on complex combinations of factors that differ from category to category. Some of these factors include economic trends, social composition and political climate. While complex relations exist between these factors, past and on-going refinements of District methodologies have resulted and will continue to result in better estimations of freshwater use. Figure 25 illustrates the amount of monthly water use and rainfall within the District in 2006.

Tables A-1, A-2 and A-3 reflect the complicated nature of water use and water withdrawal transactions. For example, Peace River/Manasota Rive Water Supply Authority (PR/MRWSA)water use permit (WUP # 10420) shows 16.389 mgd of water withdrawal during 2006, which was entirely exported and used in Charlotte, DeSoto and Sarasota counties.

Withdrawal/Use (mgd) by County and Category, 2006. Source: Estimated and pumpage based on the data obtained from District's Regulatory Database, 2006

* Data for that portion within the District

(1) Total (Withdrawal) = the sum of the preceding six columns and represents total water withdrawal by county for all categories

(2) Public Supply Use = total consumptive use of public supply water within a county. When compared to Public Supply (Withdrawal) column, a difference would represent an import or an export of publicly supplied water from one county to another. For a more detailed list of transfers, see Appendix A, Table A-3.

(3) Total (Use) = "Total (Withdrawal)" minus "Public Supply (Withdrawal)" plus (Public Supply Use).

APPENDIX A. Detailed Lists of Water Withdrawal/Use

Important Information Regarding Tables A-1, A-2, and A-3

The holder of each Public Supply permit issued for 100,000 gpd or greater receives an "Annual Public Supply Permittee Survey" which requests various information about the permittee's water use. The survey includes inquiries regarding pumpage, imports, exports, treatment plant loss, significant use, environmental mitigation, service population estimates (both permanent and seasonal), reuse and desalination information, inter-permit transfer information, and percentage breakout by customer-type.

Each Public Supply permittee located within a Water Use Caution Area (WUCA) is required to supply the District with answers to the survey's questions by April 1st of each year. All other permittees not located within a WUCA respond to the survey on a voluntary basis only. A compilation of the data received by the District is presented in Tables A-1, A-2, and A-3. An exclamation point located after a permittee's name on each table identifies those permittees who did not submit the requested information. In this case, the District estimates the requested data using the District's Regulatory Database, the Bureau of Economic and Business Research's (BEBR's) population estimates, and any other resources the District feels are appropriate to make a reasonable estimate for that permit. In addition, if withdrawal information submitted to the District is significantly different than BEBR estimates, an individual evaluation is made using BEBR and the permittee's submitted data. It is also important to note that compliance checks of the information submitted to the District are independent of this report.

Interpretation of Table A-1.

Table A-1 presents a detailed list of Public Supply water use throughout the District. The first three columns are "County of Use," "Permit Number," and "Permit Name," and are

all self explanatory. Column Four, "Withdrawal," refers to the amount of water withdrawn from the wells and pumps associated with the named withdrawal points of the permit. The withdrawal source can come from either surface water, ground water or reverse osmosis of brackish water and is indicated in Column Five. "SW" refers to Surface Water, "GW" refers to ground Water and "RO" refers to Reverse Osmosis.

If a permit purchases or transfers water from another supplier it is referred to as "imported" water. The sum total of water "imported" by a permit from any other permit(s) is listed under Column Six. Conversely, water sold or transferred to any other permit(s) is considered "exported" water. The sum total of water "exported" by a permit to any other permit(s) is listed under Column Seven.

"Treatment Loss" refers to water lost during the treatment process. Typically, the two major processes that result in "lost" water are sand filtration and reverse osmosis. The majority of potable water "lost" during sand filtration is due to the backwash process. Water "lost" during the reverse osmosis process is mostly the result of discharging the concentrate by-product. Any "Treatment Loss" associated with a permit is listed under Column Eight.

"Gross Use" is simply the calculation of "Withdrawal" plus "Imports" minus "Exports" minus "Treatment Loss." It quantifies the amount of water distributed throughout the permit's service area on an average daily basis. "Gross Use" for each permit is identified in Column Nine.

"Population" is the number of people located within a permittee's service area. This number may include both seasonal and permanent residents. For areas where there are significant seasonal fluctuations, a weighted average adjustment of the populations may have been submitted to the District and is reported in Table A-1. Otherwise, the permanent population is shown. "Population" of each permit's service area is located under Column Ten.

"Gross per Capita" is the calculation of "Gross Use" divided by "Population." "Gross Per Capita" is generally considered to be population-related withdrawals of water associated with residential, business, institutional, industrial, miscellaneous metered, and unaccounted uses. It is important to note that in previous editions of Estimated Water Use, "Gross Per Capita Use" was simply called "Unadjusted Gross Per Capita." All Public Supply permits have an "Unadjusted Gross Per Capita" value identified in Column Twelve.

"Significant Use" is defined as an individual non-residential customer using 25,000 gallons per day or greater on an annual average basis, or an individual non-residential customer whose use represents greater than five percent of the utility's annual water use. "Significant Use" is reported under Column Twelve.

"Environmental Mitigation" refers to quantities permitted by the District which allow for the pumping of water to a specific area for non-consumptive environmental purposes. These values are reported under Column Thirteen.

"Reuse/Desalination Credit" is best explained by separating the two available credits. A "Reuse Credit" is identified if a utility provides reclaimed water to customers outside of its service area. The purpose of the credit is to provide equity between utilities that provide reclaimed water to customers within their service area, which tends to reduce per capita usage, and those that provide reclaimed water to non-service area customers, which does not reduce per capita water usage. The "Reuse Credit" is equal to the amount of water that would be permitted for a freshwater withdrawal for that use.

The "Desalination Credit" is an incentive to develop desalinated water sources. The "Desalination Credit" is equal to 50 percent of the finished water produced from desalination. Both credits are identified under Column Fourteen. At this time, both the "Reuse and Desalination Credits" are only valid if a permit is located within a WUCA. However, if a

permit submitted information to the District claiming they met the guidelines to either type of credit (even though they are not located within a WUCA), the value of the credit is shown but no "Gross Per Capita" is calculated.

"Adjusted Gross Per Capita" is a population-related water use which allows for the deduction of "Significant Use," "Environmental Mitigation," and a "Reuse/Desalination Credit." "Adjusted Per Capita" is a value that only applies to those permits located within a WUCA and is calculated in Column Fifteen. For those permits falling outside of a WUCA, no value is shown. The formula is as follows: "Adjusted Gross Per Capita" = ("Gross Use" minus "Significant Use" minus "Environmental Mitigation" minus "Reuse/Desal Credit") divided by "Population." It is important to note that in previous editions of the Estimated Water Use Report, "Adjusted Gross Per Capita" was called "Compliance Per Capita." These changes were due to SWUCA II methodology rule changes.

Interpretation of Table A-2

As part of the requirement of permits located within WUCA boundaries, each Public Supply permit holder must provide the District with information regarding their service area. The utility's water distribution must be categorized into the following areas by percentage: Agricultural, Industrial/Commercial, Mining/Dewatering, Residential, Recreational/Aesthetic, Fire/Other, and unaccounted for water. All non-WUCA permits submitting this information are done on a voluntary basis. Permittees who did not submit data to the District appear with an exclamation point following their names. Data for these permits were obtained from previous reports.

The first three columns are "County," "Permit Number," and "Permit Name(s)," and are all self-explanatory. Column Four refers to "Gross Use" and is taken directly from Table A-1, Column Nine. "Gross Use" refers to the amount of water withdrawn by a permit, plus any imports, minus any exports, minus any treatment plant loss.

Columns Five through Eleven are values that are directly submitted to the District by the permittee. They represent the percent breakout of the utility's service population. A total of all the categories equals 100 percent.

"Residential Use" in Column Twelve represents the amount of water supplied by the utility going directly to residents for consumption. All non-residential water consumption is excluded. "Residential Use" is calculated by multiplying "Gross Use" by the "Percent Residential."

"Population Served" is taken directly from Table A-1 and can be found in Column Thirteen.

"Residential Per Capita" represents the average amount of water used by each person within a service area for residential activities such as cooking, washing vehicles, irrigating landscape, showering, etc. It does not include water use by restaurants, schools, car washes, etc. These activities are considered non-residential and are accounted for under different categories. "Residential Per Capita" can be found in Column Fourteen.

"Per Capita" is listed for comparison purposes only. It is taken directly from Table A-1 and represents an average per person consumption of water which includes non-residential uses. "Per Capita" is found in Column Fifteen.

"Unaccounted For Use" represents the average amount of water lost after leaving the treatment plant resulting from system leaks, inaccurate meters, non-billed accounts, etc. This value is calculated in Column Sixteen by multiplying "Gross Use" by "Percent Unaccounted For."

"Industrial/Commercial Use" represents the average amount of water provided by a utility used directly for Industrial/Commercial purposes. This value is calculated in Column Seventeen by multiplying "Gross Use" by "Percent Industrial/Commercial."

It is important to note that not all permits found in Table A-1 are identified in Table A-2. If the District was unable to provide a reasonable

estimate of percent breakout of service area, the permit was excluded from Table A-2.

Interpretation of Table A-3

This table identifies significant inter-permit water transfers submitted to the District in response to the "Public Supply Permittee Survey." In some cases, a different import/export number may have been reported by the two permits involved in the transfer. For instance, Permit A might report they receive 2.0 million gallons per day from Permit B, while Permit B reports they supply Permit A with 2.2 million gallons per day. The difference in import/export amounts may be a result of system loss, billing inconsistencies, or some other accounting differences.

The first three columns indicate "County," "Permit Number," and "Permit Name," and are all self-explanatory. The "Import Details" section identifies the Water Use Permit (WUP) Number supplying the water, the county where the water will be consumed, and the amount exported. If no data are located within the "Export Details" section, no export of water takes place. It is important to note that not all transfers are easily identified as moving from one specific WUP number to another. In this case, the term of "system" is used to identify multi-permit transfers taking place.

APPENDIX A. Detailed Lists of Water Withdrawal/Use

2006 Estimated Water Use Report

NOTES:

(GPCD) = gallons per capita per day

(GPD) = gallons per day

(mgd) = million gallons per day

* Wholesale Water Importer

! = Public Supply Permittee Survey was not received. Withdrawal amount was metered. Population served was derived from 2005 Estimated Water Use Report and/or "Florida Estimates of Population 2005-2030," February 2007, Bureau of Economic and Business Research.

(1) GW = ground water, SW = surface water, RO = reverse osmosis

(2) IMPORT = Water purchased or transferred from another utility.

(3) EXPORT = Water sold or transferred to another utility.

(4) TREATMENT LOSS = Annual average gallons per day which are lost in routine treatment for potability. This includes, but is not limited to, desalination reject water, sand filtration backwash, and quantities used to maintain appropriate water quality in pipelines or tanks.

(5) GROSS USE (also called "finished") = (withdrawal) + (import) - (export) - (treatment loss).

(6) GROSS PER CAPITA = (gross use) / (population). Population-related withdrawals associated with residential, business, institutional, industrial, miscellaneous metered, and unaccounted water uses are applicable to all public supply permits.

(7) SIGNIFICANT USE = Applicable in the NTBWUCA and SWUCA only. NTBWUCA: Individual non-residential water customer, excluding golf courses, that on an annual average basis uses greater than 25,000 gallons per day or a quantity that is greater than five percent (5%) of the utility's annual average water use. If deducted, they must be documented and accompanied by a water conservation plan specific to the use(s) deducted. See Chapter 7, Section 7.3 of the BOR. SWUCA: There are five options: A: Single Significant Use; B: District-Wide Percent I/C Use; C: Combined Regional Government and Higher Education Facilities; D: Individual Regional Health Facilities, E: Individual Industrial/Commercial Facilities Where Water Is the Primary Ingredient or Final Product. Definitions and exclusions of each type are given in the BOR, Chapter 3, Section 3.6.

(8) ENVIRONMENTAL MITIGATION = Annual average quantities used by a utility to mitigate withdrawal-related stress to a specified environmental feature as required by the utility's Water Use Permit (WUP).

(9) REUSE/DESAL CREDIT = A deduction from the gross per capita that is applicable to utilities within the NTBWUCA only if the utility provides reclaimed water for beneficial use to an area that is outside the utility's service area or delivered inside the service area for a use that would otherwise not be served by the utility.

(10) ADJUSTED GROSS PER CAPITA = $[(\text{gross use}) - (\text{significant use}) - (\text{environmental mitigation}) - (\text{reuse/desal credit})] / (\text{population})$. Only calculated if a permit is within a water use caution area. This is a rate that is calculated for compliance with the 150 gpd per person limit.

(11) Permit # 5789 includes # 2179 & # 3408

(12) Permit # 4167 includes # 11768

(13) Permit # 4352 now includes the service area of # 2840 Seaboard and # 3704 Valrico Hills, Per Jim Jeffers

(14) Permit # 266 includes # 25, # 2030, # 5245, # 6011, # 6028, and # 11863

(15) Permit # 7411 includes # 4836, and # 8836

The totals for Gross Use, Population Served, and Gross Per Capita listed in Table A-2 will not match those listed in Table A-1. This is because not all of the permittees are listed in Table A-2, either they have never submitted Form B or the information from previous years' reports is outdated.

(MGD) = Million gallons per day

(!) Form B, "Type of Water Use" of the Public Supply Permittee Survey was not received. Data was derived from previous years' reports.

Gross Use is taken directly from Table A-1, column 10, and represents the total amount of water withdrawn plus imports minus exports and treatment loss.

- 1) Percent of water supplied that is used for residential purposes only.
- 2) Percent of water supplied that is used for industrial/commercial purposes only.
- 3) Percent of water supplied that is used for mining/dewatering purposes only.
- 4) Percent of water supplied that is used for agricultural purposes only.
- 5) Percent of water supplied that is used for recreational/aesthetic purposes only.
- 6) Percent of water supplied that is used for fire fighting, line flushing, and other accountable purposes only.
- 7) Percent of water supplied that is unaccounted for due to system leaks, illegal connections, etc.
- 8) Residential Use = (Gross Use) X (% Residential). This number represents the total amount of water that is used for residential purposes only.
- 9) Population Served is taken directly from Table A-1, column 11, and represents the service area population for the permittee listed.
- 10) Residential per capita = (residential water use) / (population). This number represents the average quantity of water used per person per day for residential purposes only.
- 11) Gross per capita = (gross use) / (population served). This number represents the average quantity of water used per person per day for any purpose (including agricultural, industrial, etc.).
- 12) I/C Use (Industrial/Commercial Water Use) = (Gross Use) X (% I/C). This number represents the amount of water that is supplied for industrial/commercial purposes only.
- 13) UAW Use (Unaccounted For Water Use) = (Gross Use) X (% UAW). This number represents the amount of water that is unaccounted for each day by the permittee listed.

2006 Estimated Water Use Report

Table A-3. Reported Public Supply Permit-to-Permit Water Transfers, 2006

[illegible]

NOTES:

"SYSTEM" denotes water transferred within the central system of Tampa Bay Water.

* : This denotes that only a portion of the export goes to the utility indicated, the rest is supplied to small public utilities that are not listed in this table. Export quantities listed will be higher.

¹This alternate designation is used for identification, as the utility is a wholesale customer of Tampa Bay Water and does not hold a current water use permit.

**: Imported and exported water quantities are not equal due to loss during transport through the system, reporting differences from water suppliers, quantities used for augmentation and treatment loss by Tampa Bay Water, transfers between the Tampa Bay Water "SYSTEM" including quantities transferred to the C.W. Bill Young Regional Reservoir, and imports/exports from/to outside the Southwest Florida Water Management District.

Note: These quantities were supplied to the Southwest Florida Water Management District by each individual permittee listed.

Source: Estimated and pumpage data obtained from the District's Regulatory Database, 2006

- (1) PERMIT NO. = Permit number assigned to the permit by the District and remains the same for the life of the permit
- (2) REV. NO. = Revision number attached as a suffix to the permit number and increases by one each time the permit is renewed or modified.
- (3) PERMITTEE is the permit owner and/or lease holder of the property associated with the permit.
- (4) USE CODE is a code assigned to the permit which designates the permit's primary need for water (i.e., citrus production, golf course irrigation, cement manufacturing), etc.).
- (5) WITHDRAWAL SOURCE = Ground water (G) or Surface Water (S).
- (6) 2006 USE = Each permit's average daily withdrawal of water in million gallons per day in 2006.
- (7) TOTAL PERMIT QUANTITY – Total amount of water permitted (may include one or more of the following categories: Recreational/Aesthetic, Agricultural, Public Supply, Industrial/Commercial, Mining/Dewatering).
- (8) USE TYPE PERMIT QUANTITY is permitted amount for Recreational/Aesthetic water use only.

Source: Estimated and pumpage data based on the data obtained from District's Regulatory Database, 2006

Notes:

- (1) PERMIT NO. = Permit number assigned to the permit by the District and remains the same for the life of the permit
- (2) REV. NO. = Revision number attached as a suffix to the permit number and increases by one each time the permit is renewed or modified.
- (3) PERMITTEE is the permit owner and/or lease holder of the property associated with the permit.
- (4) USE CODE is a code assigned to the permit which designates the permit's primary need for water (i.e., citrus production, golf course irrigation, cement manufacturing), etc.).
- (5) WITHDRAWAL SOURCE = Ground water (G) or Surface Water (S).
- (6) 2006 USE = Each permit's average daily withdrawal of water in million gallons per day in 2006.
- (7) TOTAL PERMIT QUANTITY – Total amount of water permitted (may include one or more of the following categories: Recreational/Aesthetic, Agricultural, Public Supply, Industrial/Commercial, Mining/Dewatering).
- (8) USE TYPE PERMIT QUANTITY is permitted amount for Agricultural water use only.

TOTAL					40.835	152.048	133.595

Source: Estimated and pumpage based on the data obtained from District's Regulatory Database, 2006

Notes:

- (1) PERMIT NO. = Permit number assigned to the permit by the District and remains the same for the life of the permit
- (2) REV. NO. = Revision number attached as a suffix to the permit number and increases by one each time the permit is renewed or modified.
- (3) PERMITTEE is the permit owner and/or lease holder of the property associated with the permit.
- (4) USE CODE is a code assigned to the permit which designates the permit's primary need for water (i.e., citrus production, golf course irrigation, cement manufacturing), etc.).
- (5) WITHDRAWAL SOURCE = Ground water (G) or Surface Water (S).
- (6) 2006 USE = Each permit's average daily withdrawal of water in million gallons per day in 2006.
- (7) TOTAL PERMIT QUANTITY – Total amount of water permitted (may include one or more of the following categories: Recreational/Aesthetic, Agricultural, Public Supply, Industrial/Commercial, Mining/Dewatering).
- (8) USE TYPE PERMIT QUANTITY is permitted amount for Mining/Dewatering water use only.

Source: Estimated and pumpage based on the data obtained from District's Regulatory Database, 2006

Notes:

- (1) PERMIT NO. = Permit number assigned to the permit by the District and remains the same for the life of the permit
- (2) REV. NO. = Revision number attached as a suffix to the permit number and increases by one each time the permit is renewed or modified.
- (3) PERMITTEE is the permit owner and/or lease holder of the property associated with the permit.
- (4) USE CODE is a code assigned to the permit which designates the permit's primary need for water (i.e., citrus production, golf course irrigation, cement manufacturing), etc.).
- (5) WITHDRAWAL SOURCE = Ground water (G) or Surface Water (S).
- (6) 2006 USE = Each permit's average daily withdrawal of water in million gallons per day in 2006.
- (7) TOTAL PERMIT QUANTITY – Total amount of water permitted (may include one or more of the following categories: Recreational/Aesthetic, Agricultural, Public Supply, Industrial/Commercial, Mining/Dewatering).
- (8) USE TYPE PERMIT QUANTITY is permitted amount for Industrial/Commercial water use only.

NOTES:

(1) Combined county utilities systems; before 1994, represented west system only.

(2) Before 1994, represented North Lakeland system only; combined County reporting 1994-1999.

(*) The calculation of population changed from 1995 to 1996 which reflected a significant per capita reduction.
