

## Community Planning Pages

The intent of these pages is to assist counties and municipalities as they amend their comprehensive plans to update the 10-Year Water Supply Facilities Work Plans (Work Plans) required by subsection 163.3177(6)(c), F.S. The pages provide data in a concise format that may be used by a local government to complete an updated Work Plan. Communities are not obligated by statute or rule to use these data; however, these pages reflect an effort to bridge two distinct but complimentary programs, the first being the Department of Economic Opportunity requirement for local governments to complete Work Plans and the second being the Department of Environmental Protection requirement for water management districts to complete Regional Water Supply Plans. The data included in these pages are collected and compiled by the District for use in a variety of District programs, including the review of community water supply planning documents. The explanation below describes the nature, source and intended use of the data provided in the community planning pages.

### DEFINITION OF TERMS

<b>Demand Analysis</b>	
Municipal Population Served	That portion of the utility service area population that is within the municipal boundary.
Municipal Demand (MGD)	The above population multiplied by the utility's Average Unadjusted Gross Per Capita Water Use. <i>(Municipal Population Served x Utility Gross Per Capita Water Use)</i>
Total Utility Service Area Population	The total population within the utility service area
Total Utility Service Area Demand (MGD)	The above population multiplied by the utility's Average Unadjusted Gross Per Capita Water Use. <i>(Utility Population Served x Utility Gross Per Capita Water Use)</i>
County Population Served	That portion of the utility service area population that is within the unincorporated county boundary.
County Demand (MGD)	The above population multiplied by the utilities Average Unadjusted Gross Per Capita Water Use. <i>(Unincorporated County Population Served x Utility Gross Per Capita Water Use)</i>
Domestic Self Supply Population	The community population not served by a utility.
Domestic Self Supply Demand (MGD)	The above population multiplied by the estimated Unadjusted Gross Per Capita Water Use. <i>(DSS Population x Gross Per Capita Water Use)</i>
Municipal Population	Total population within the municipal boundary.
Municipal Per Capita Water Use	The population weighted mean per capita of utilities serving within the municipality. Could be used as a jurisdictional potable water LOS.
County Population	Total population within the unincorporated county boundary.
County Per Capita Water Use	The population weighted mean per capita of utilities serving within the unincorporated county. Could be used as a jurisdictional potable water LOS.
Total Demand (Municipal)	Total water use demands of the municipal population.
Total Demand (County)	Total water use demands of the unincorporated county population.
Total Demand (Utilities)	Total water use demands of all total utility service area populations.
<b>Supply Analysis</b>	
Total Utility WUP Quantities	The total water use permit quantities for the utilities serving the community.
Total Domestic Self Supply	Current estimated Domestic Self Supply withdrawals within the community boundary.
Water Supply Authority WUP Quantities	The total permitted capacity of the serving water supply authority.

Population data is derived from a District geographic information system (GIS) based model which projects population fluctuation at the census block level, distributes the projections to parcels within each block, then normalizes the projections to BEBR medium county level data. Demands are calculated using a five year average of Per Capita Water Use statistics as published in the 2020 – 2040 Regional Water Supply Plan. The Water Use Permit (WUP) information comes from the District's Water Management Information System (WMIS) database which is available at [WaterMatters.org](http://WaterMatters.org). Information regarding future source options is derived from the 2020 – 2040 Regional Water Supply Plan. "Multiple" entries indicated those source options that could be developed by more than one government or agency. For additional information about these Community Planning Pages, please contact Trisha Neasman or Jim Golden at 1-800-423-1476.

#### Notes and Disclaimers

- The Demand Analysis projections are intended solely for use by local governments in developing 10-Year Water Supply Facility Work Plans and related updates required under subsection 163.3177(6)(c), Florida Statutes. They are for planning purposes only and should not be construed to be a commitment by the District for issuance of a Water Use Permit.
- The conservation yields provided under the Future Source Options heading are based entirely on the region's overall percent reduction in demand. It is important to note that, in the regional model, water use data used on each parcel is randomly assigned and is based on average load profiles of use for all of the utilities in the region. Consequently, individual utilities could have significantly more or less conservation potential based on actual water use and real local customer base.
- Under the Future Source Options heading, if a regional water supply authority is listed as the responsible entity, or there are multiple responsible entities, the potential yield is typically for the benefit of more than one local government. Consequently, individual local governments should not assume they are entitled to the entire potential yield.
