RFP 2115- TSALA APOPKA GOLF COURSE CONTROL STRUCTURE MODIFICATION (REBID)

ADDENDUM #5
(Acknowledgment is Required)

The Respondent must acknowledge the receipt of this Addendum by signing below and including a signed copy of this Addendum with its Request for Proposal.

Please note that underlined information (*example*) is added wording and stricken information (*example*) is deleted wording.

1. Please note that Paragraph 1 of Attachment 2, Bidder Qualification Requirements (Page 24 of 56) of the above referenced solicitation will be modified as follows:

    Bidder must provide a minimum of two (2) references who can verify bidder's qualifications and past performance on projects of similar size and nature within the last ten (10) years, that meet the requirements below. At least one (1) reference provided must be from a source other than the District.

2. Please note that Paragraph 1 of Attachment 2, Bidder Qualification Requirements (Page 24 of 56) of the above referenced solicitation will be modified as follows:

    2.36 TESTS.

    The District will have the right to require all materials to be submitted to test prior to incorporation into the work by an appropriately certified testing company. In some instances, it may be expedient to make these tests at the source of supply, and for this reason, it is requested that the Contractor furnish the District with information concerning the location of his source before incorporating material into the work. This does not in any way obligate the District to perform tests for acceptance of material and does not relieve the Contractor of his responsibility to furnish satisfactory material. The Contractor will furnish two (2) copies of manufacturer's certificate of compliance with these specifications covering manufactured items incorporated into the work. The Contractor will pay all costs for testing required, together with other changes incidental to testing.

    While there are no known contaminants, disposition of excess material must comply with all local, state, and federal rules and regulations. Any testing required for disposition (and associated costs) will be the responsibility of the Contractor. If final disposal of the contaminated soil must be to a hazardous waste disposal facility (based on the testing), the additional costs for disposal of contaminated soil versus uncontaminated soil will be paid from project contingency funds at cost and requires prior authorization.

STRUCTURE PROFILE
Golf Course Revised 2012

Golf Course

Purpose: Golf Course water control structure regulates flow in the canal between the Floral City Pool and the Inverness Pool in order to maintain desirable water levels in Lake Tsala Apopka.

Location: The structure is located within a 100 foot county road right-of-way and within the 100 foot canal right-of-way just off of *E. Sandpiper Drive* on the east side of the *Inverness Golf and Country Club,* (just outside of the country club proper). Furthermore, the structure is situated ≈4 miles southeast of the City of Inverness in Citrus County, in the Withlacoochee River Basin, in Section 26, Township 19 S, Range 20 E.

Access and Security: Golf Course structure is accessed directly off of *E. Sandpiper Drive* along a 100 foot county right-of-way. The control box is secured with a special lock marked "STR"; <u>note</u>, keys for such locks are not found on vehicle key rings. The breaker panel box lock combination is **7211**. Also, another special key is needed to access and to *manually* operate the structure at the actuators.

Directional Overview

Physical Description: The structure consists of four, 49" wide by 48" high, steel drop-crest sluice gates. The gates are operated via hoists consisting of gearheads and stems that are powered by motorized-actuator lift systems. There is an operating platform that is used to access the hoists and gates. The upstream and downstream conveyance channels are lined with rock rubble to control erosion. The structure is operated remotely via the control panel.

Operational Protocol

General Information

*Normal Operations***:** Sluice gates are operated remotely (*i.e.*, from land) via a control panel.
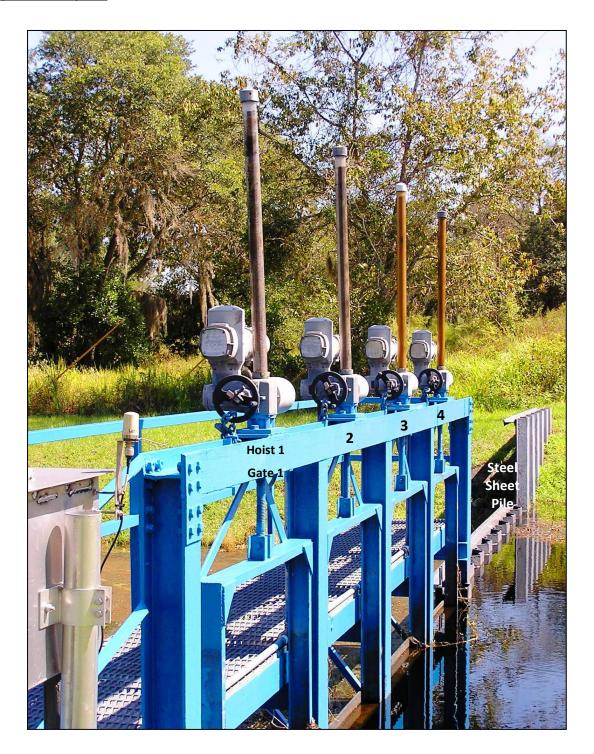

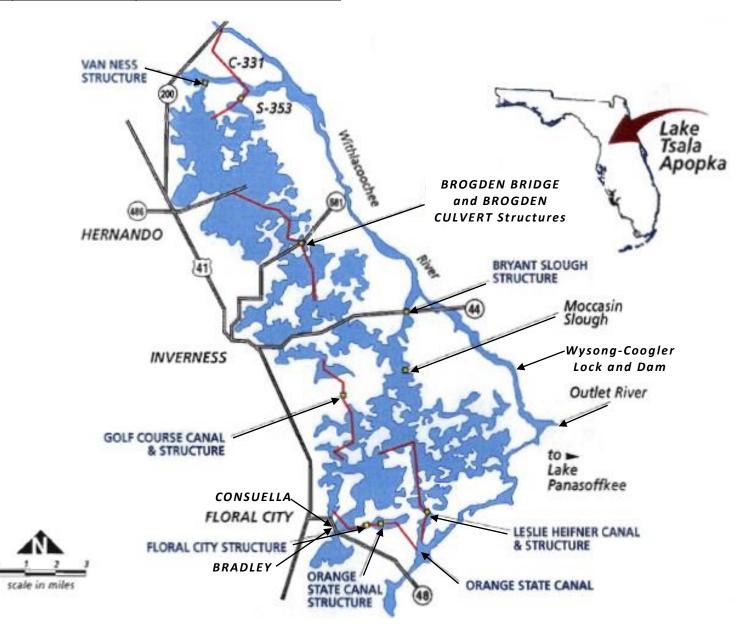

*Golf Course***:** The Tsala Apopka Chain-of-Lakes encompasses approximately 23,300 acres across three distinct pools: the Floral City Pool with 9,100 acres, the Inverness Pool with 8,000 acres, and the Hernando Pool with 6,200 acres. The water elevation for the Floral City Pool and the Inverness Pool are maintained within the range of adopted levels by raising or lowering the sluice gates at *Golf Course*. With the gates in the full closed position, the crest elevation is 42.0 feet msl (41.16 NAVD); the invert elevation of the structure is 38.0 msl (37.16 NAVD). Each sluice gate has an effective discharge width of 49".

Conveyances: The upstream canal runs south connecting Lakes Tussock, Hampton, and Floral City, all of which are part of the Floral City Pool. The downstream runs north through a small lake, then through Davis Lake to Spivey Lake, both of which are part of the Inverness Pool. Both upstream and downstream canal bottoms are at elevation 34 feet with a bottom width of 20 feet and side slopes of 1:2.

The System: Flows from the Withlacoochee River first enter the Floral City Pool through the *Leslie Heifner* structure via the Leslie Heifner Canal as well as through the *Floral City* structure via the Orange State Canal. During certain conditions, water may enter through the *Flying Eagle* structure located on Flying Eagle Preserve's north/south berm. Flows move from the Floral City Pool into the Inverness Pool via the *Golf Course* and *Moccasin Slough* structures. From the Inverness Pool, flows enter the Hernando Pool primarily through the *Brogden Bridge* structure*,* and, to a lesser extent, through the *Brogden Culvert* structure. Water in the Inverness Pool can be discharged back into the Withlacoochee River through the *Bryant Slough* structure. Water from the Hernando Pool can be discharged back to the Withlacoochee River through S-353 and, to a lesser extent, through *Van Ness* via *Two Mile Prairie* to the north.

Operations in a Commercial Power Failure

1. The structure can be operated by connecting a generator to the power cord in the breaker box, then switching the main breaker to generator.
2. Also, the structure can be operated *manually* by engaging the manual lever on the actuator and then turning the attached wheel.

Safety Breaker—Main/Generator

Operational Protocol

Normal Operating Range
During the filling process in the *Normal Operating Range*, river inflows are apportioned equally among the three pools. Near the end of the rainy season when the three pools are at or near their *Target Levels*, and flow is still being diverted from the river, flows are passed through the system without increasing pool stages. If this cannot be done without exceeding the *Target Levels*, the *Leslie Heifner* and *Floral City* structures are operated to restrict flow from the river, as necessary, to maintain pool water levels. At any time during the filling mode, if water elevations in the pools have clearly peaked and have started to recede due to diminished rainfall or river inflow, structures *Van Ness*, *S-353*, *Brogden Bridge*, *Brogden Culvert*, *Golf Course*, and *Moccasin Slough* are closed to conserve water in the three pools.

History: The Gregg, Gibson, and Gregg Construction Company built a timber flashboard type structure for the District in 1965. The design required a crane to add and remove the very large timbers in order to set a desired crest elevation. In June 1975, District personnel modified the structure so that the top three timbers could be operated as a single lift gate. The structure's current form and operating mode was preceded by manually-operated gate hoists. A subsequent modification altered the structure to its present configuration. The structure lies within the county road right of way known as E. Sandpiper Drive. Citrus County owns fee title to the land where the structure is located. The District has no ownership interests in the subject land.
