A garden is a friend you can visit anytime.

Butterflies are self-propelled flowers.

Plants that butterflies like also save water.

Choose plants that need less water, fertilizer and pesticides. This helps caterpillars become butterflies.

Group plants based on their watering needs.

This will allow you to spend less time taking care of your garden and more time enjoying your butterflies!

Plant water-conserving plants. Many water-conserving plants look as lush and green as water-thirsty plants.
