The Southwest Florida Water Management District (District) does not discriminate on the basis of disability. This nondiscrimination policy involves every aspect of the District's functions, including access to and participation in the District's programs and activities. Anyone requiring reasonable accommodation as provided for in the Americans with Disabilities Act should contact the District's Human Resources Office Chief, 2379 Broad St., Brooksville, FL 34604-6899; telephone (352) 796-7211 or 1-800-423-1476 (FL only), ext. 4703; or email ADACoordinator@WaterMatters.org. If you are hearing or speech impaired, please contact the agency using the Florida Relay Service, 1-800-955-8771 (TDD) or 1-800-955-8770 (Voice).

Who We Are & What We Do

Who We Are

The Southwest Florida Water Management District (District) manages the water resources for west-central Florida as directed by state law. The District encompasses roughly 10,000 square miles in all or part of 16 counties and serves a population of nearly 5 million people. The goal of the District is to meet the water needs of current and future water users while protecting and preserving the water resources within its boundaries.

A 13-member Governing Board oversees District activities. Members are unpaid volunteers appointed by the Governor and confirmed by the state Senate to set policy and administer the budget.

District funding comes from voter-approved ad valorem property taxes, along with other intergovernmental sources.

What We Do

The District was established in 1961 as a flood protection agency. Since then, its responsibilities have grown to include managing the water supply, protecting water quality and preserving natural systems that serve important water-related functions.

Water Supply

Ensuring adequate water supplies for people, animals and the environment is central to the District's mission. The District issues water use permits to ensure withdrawals from water bodies will not harm existing users, the water resources or the environment. The District also contributes funding and technical expertise to local governments for programs that conserve water and develop alternative water supplies.

Flood Protection

The District accomplishes flood protection through structural and nonstructural methods. Structural methods include the operation of 18 flood control structures. Nonstructural methods include purchasing lands that store floodwaters, issuing permits to ensure new development does not cause flooding, and contributing funds and technical expertise to local governments for flood protection programs.

Water Quality

The District is actively involved in maintaining and improving the water quality within its boundaries. District permits require new developments to capture and treat polluted stormwater before it is released. Other water quality activities include various stormwater improvement projects, plugging abandoned wells and restoration of springs and other habitats that naturally filter water.

Natural Systems

Protecting water-related natural systems increases the District's ability to carry out all of its responsibilities. To protect natural systems, the District purchases lands that store floodwaters, secure future water supply or serve other water-related functions. Additional protection methods include habitat restoration and the establishment of minimum flows and levels for water bodies.
